BACKGROUND AND PURPOSE

In 2025, HL7® International and Firely partnered again to conduct a global survey aimed at gaining deeper insights into the current state and progression of HL7 FHIR adoption. This year's survey focused on identifying shifts in adoption rates, understanding how FHIR is being applied across different regions, tracking which FHIR versions are in use, and uncovering both the key drivers and persistent challenges influencing global adoption. To ensure broad community awareness and engagement, the results were shared at HL7 FHIR DevDays 2025.

SAMPLE AND METHODOLOGY

An online survey was distributed to HL7 affiliates and national standards organizations worldwide in April 2025. The goal was to obtain input from at least one informed respondent per country. Ultimately, 82 responses were collected from 52 distinct countries—marking a significant increase from 2024, which saw 38 responses from 29 countries (in time to be included in the written report.)

Many of the survey questions were open-ended, encouraging participants to share insights that reflected the unique circumstances in their respective countries. However, not all responses from the same country aligned, highlighting differences in perspective or implementation. Given the modest number of responses, the results should be interpreted primarily as qualitative rather than quantitative.

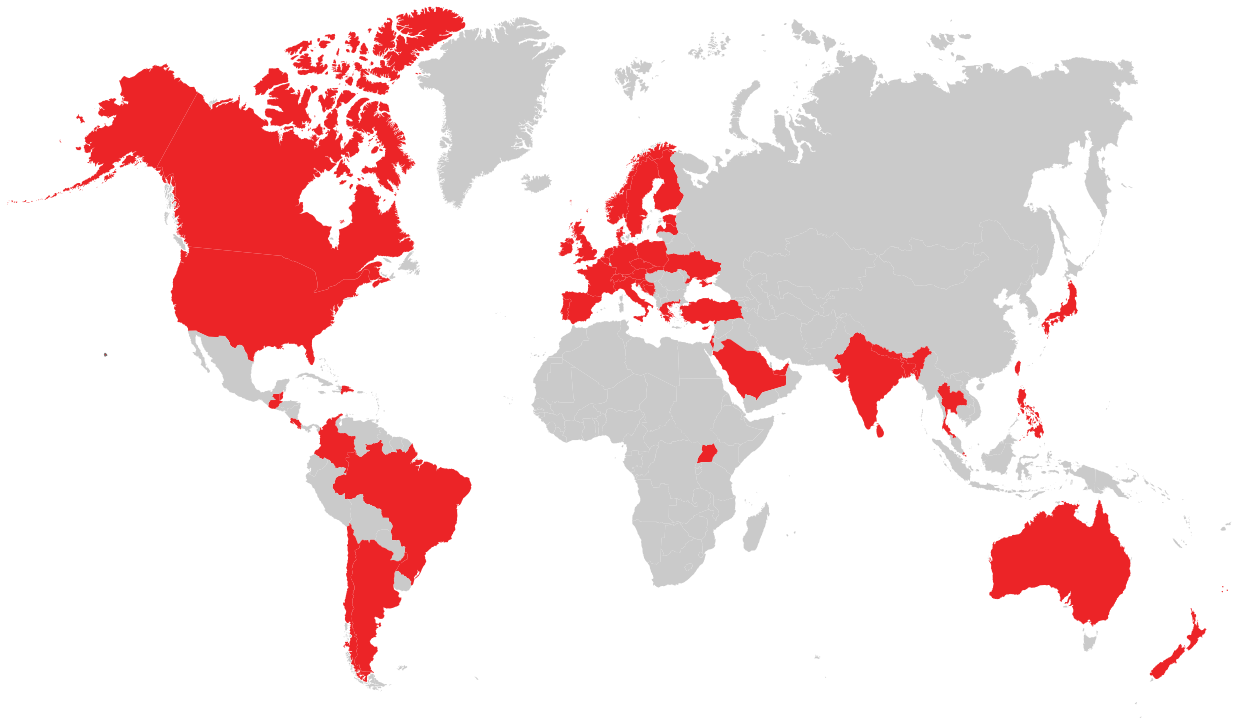

Detailed Findings

PARTICIPATING COUNTRIES

82 responses were received from 52 unique countries. Multiple responses were received from 19 countries.

The response was remarkably higher than in the past two reports:

2024: 38 responses from 29 countries
2023: 32 responses from 24 countries

WHO RESPONDED?

Of the 82 respondents, 17 were from HL7 affiliates and 39 were from other organizations. This compares to:

2024: 12 HL7 affiliates and 26 from other organizations
2023: 13 HL7 affiliates and 19 from other organizations

FHIR CURRENT USE

Q. To what extent is FHIR already being used to exchange healthcare data in your country?

The majority of respondents, 58 of 82, or 71%, said FHIR is being used for a few use cases. This is somewhat higher than in 2024 when 25 of 38 respondents (66%) said the same.

Contradictions among respondents from the same country were common.

FHIR VERSION USE—DSTU2

Q. Among those who are using FHIR within your country: What version of FHIR are they using?

Half of respondents (36 of 61) are not using **DSTU2**, and another 15 don't know if it's being used within their country. Uganda said **DSTU2** is their main standard. The responses were similar to 2024, but with more "don't know" answers in 2025.

FHIR VERSION USE—STU3

Q. Among those who are using FHIR within your country: What version of FHIR are they using?

Nearly half of respondents (27 of 62) are not using **STU3** at all. Another 18 respondents did not know if they are using **STU3**. Only one country, Netherlands, reported that they are using **STU3** as their main standard, which is consistent with 2024.

FHIR VERSION USE—R4

Q. Among those who are using FHIR within your country: What version of FHIR are they using?

The highest number of respondents (31 of 78) said they are using **R4** as their main standard. This represents 40%, which is a **decrease** from 58% of respondents in 2024 (22 of 38) who said **R4** was their main standard.

FHIR VERSION USE—R4B

Q. Among those who are using FHIR within your country: What version of FHIR are they using?

With regard to **R4B**, 25 of 60 respondents said they are not using it at all in their country, and another 19 said they don't know. Latvia and Singapore said **R4B** is their main standard. This question was new in 2025.

FHIR VERSION USE—R5

Q. Among those who are using FHIR within your country: What version of FHIR are they using?

Among respondents, 25 of 67 said they do not use **R5** at all in their country. Respondents from Belgium and Estonia reported **R5** to be their main standard, however, there was a contradiction with other respondents from Belgium saying **R5** is not used at all, or that they didn't know. Estonia was consistent in that it had also reported using **R5** as its main standard in 2024.

FHIR ADOPTION RATE CHANGE

Q. What change do you expect in the rate of adoption of FHIR in the coming years in your country?

Nearly half of respondents (39 of 72) expect a **strong increase** in the rate of adoption of FHIR. This represents 54%, which is a **substantial increase in the proportion of respondents who expected a strong increase in adoption** over 2024 (39%).

CURRENT REGULATION

Q. Is there any regulation in place that mandates the use of standards in electronic health data exchange in your country?

The majority of the respondents (64 of 82) reported that their respective countries had regulation in place for the use of standards in electronic health data exchange. This level is slightly lower than reported in 2024 (31 of 38) and 2023 (27 of 32). It should be noted, however, that there were contradictions between respondents from Australia, Belgium, Brazil, Germany, Guatemala, Norway, Switzerland, and Thailand.

REGULATION MENTION FHIR

Q. Does the regulation specifically mention FHIR?

Among those respondents who said there is regulation in place, the majority of respondents (47 of 64, or 73%) said FHIR is either mandated or is being advised in their country's most important regulation that prescribes the use of standards in electronic health data exchange. This is **higher** than reported in 2024 (20 of 31, or 65%) and 2023 (15 of 27, or 56%). **Regulation mentioning FHIR is increasing**.

YES, FHIR is mandated

REGULATION FINES

Q. Are there fines imposed in case the regulation is not met before the deadline?

Among those respondents who said there is a regulation in place, the majority (41 of 64) said there are no fines if the deadline to comply with the regulation is not met. This is a **higher proportion of respondents saying there are no fines if regulation is not met** than in 2024 (18 of 31) and 2023 (17 of 27).

FUNDS TO STIMULATE ADOPTION

Q. Are there government funds available to stimulate the adoption of FHIR?

In 2025, 39 of 82 respondents said there are no government funds available in their respective countries to stimulate the adoption of FHIR, a slightly higher proportion than in 2024 (15 of 38). 36 of 82 respondents said there are funds available, which is slightly lower than 2024 (19 of 38) and 2023 (15 of 32). **This suggests the prevalence of government funds available for FHIR adoption may be decreasing, or the respondents are not aware of the funds.**

STANDARDS DETAIL/OTHER COMMENT

Q. Can you share more information about these regulations and funds, including names and links?

Q. Is there anything else you'd like to mention regarding health data regulation in your country?

Respondents were given the opportunity to provide additional information and open-ended comments about health data standards regulation in their countries.

Argentina

115/2019 Esta resolución crea la Red Nacional de Interoperabilidad en Salud y el Registro de Dominios de Interoperabilidad en Salud. https://www.argentina.gob.ar/normativa/nacional/resoluci%C3%B3n-115-2019-319286

https://www.ehealth.fgov.be/standards/fhir/index.html

https://www.agoria.be/en/services/expertise/digitalisation/healthtech/belgian-ehealth-ecosystem-tests-international-standard-hl7-fhir

First there was the datacapabilities call (16/03/2023): https://www.health.belgium.be/nl/oproep-projecten-data-capabilities which gave hospitals money to map their data to fhir and use it both primary and secondary.

Next came the innovation project call (24/11/2023) https://www.health.belgium.be/nl/news/oproep-projecten-data-capabilities-0 which focused on primary use, AI and again the use of FHIR and snomed ct

Lastly came the cross project call (28/03/2025) https://www.health.belgium.be/nl/oproep-cross-over-projecten to build further on the datacapabilities and innovation project but add more interoperability and alignment between the projects such that we could really build further on the Belgian FHIR profiles and use them in practise in as many hospitals and software companies as possible

Belize

The ministry of health & wellness is looking to have a regulatory framework for the CDEP clinical data exchange platfrom

There is an IDB loan to help with some of these gaps the ministry of health & wellness have

Brazil

https://simplifier.net/redenacionaldedadosemsaude

Brazil has developed several national implementation guides to standardize and enhance interoperability in healthcare. Among the main ones are:

1. BR-Core: This is Brazil's national implementation guide based on HL7® FHIR®. It defines specific profiles and resources adapted to the Brazilian healthcare system, supporting secure and efficient health data exchange.

2. IPS-Brasil: Brazil's adaptation of the International Patient Summary (IPS), structured to reflect local healthcare needs while aligning with international standards.

3. Terminologias do Brasil: The Ministry of Health has published the Brazilian Terminology Implementation Guide, an initiative by the Ministry of Health aimed at standardizing the use of clinical and administrative terminologies across health information systems. This guide is essential for enabling semantic interoperability nationwide and is based on the HL7® FHIR® standard.

You can access the guides here: https://terminologia.saude.gov.br/fhir

https://hl7.org.br/fhir/core/

The ips Guide is to be published soon

Canada

Infoway & CIHI are investing in initiatives, as are some provincial governments

Chile

About Regulations there are 2 laws: Law 21541 ofm telemedine and its technical normative No 237;

Law 21688 of Interoperable Health Registry, it´s normative is in process of being build. Alsa we have EIS 231, normative to standarize in the public health sector data formats. Ministry of health has a Interoperability department that have this year founds for national proyects.

We have had great progress in the last 5 years

Ley 21668 (https://www.bcn.cl/leychile/navegar?idNorma=1203827), Norma general técnica 237 (https://portalsaluddigital.minsal.cl/wp-content/uploads/2025/01/2025.01.06_NORMA-TECNICA-PRESTACIONES-DE-SALUD-A-DISTANCIA-Y-TELEMEDICINA.pdf)

Colombia

Mainly, Law 2015 of 2020 and Regulatory Resolution 866 of 2021.

The law established a deadline of 5 years from January 31, 2020, for the interoperability of medical records to be possible throughout the national territory (52 million inhabitants, more than 7,000 Health Service Provider Organizations, more than 40 independent health professionals and more than 19,000 locations of health care points of care).

To date, the project has not entered into production, there are problems in the definition of architectures, workflows, FHIR profiling and no significant progress has been made.

https://www.funcionpublica.gov.co/eva/gestornormativo/norma.php?i=105472

https://www.minsalud.gov.co/Normatividad_Nuevo/Resolución%20No.%20866%20de%202021.pdf

There is in fact a FHIR Implementation Guide for this scenario, published by the Government (the Government did not decide not to count on the support of the HL7 affiliate in Colombia).

https://vulcano.ihcecol.gov.co/guia/rda.html

The HL7 user community in Colombia, with the leadership of the subsidiary, published the FHIR CORE Implementation Guides and IG Terminologies in November 2024.

http://co.fhir.guide/core/

http://terminology.fhir.guide/co/

There are other government agencies, such as the Administradora de los Recursos del Sistema General de Seguridad Social en Salud (ADRES), which in 2025 will implement HL7 FHIR (R4), for billing and claims scenario.

The District Health Secretariat of the city of Bogota is defining the FHIR Implementation Guidelines for the city's network of hospitals and clinics (11 million patients), whose first use cases will be implemented and go into production in 2025.

In several scenarios, it has been mentioned how important it is to have a regulation regarding the use of standards in software products for healthcare organizations, but there are still no important government decisions in this regard.

Cook Islands

Not that I know

We got a Cook Islands Government digital 2022 strategy

Costa Rica

No

N/A

Costa Rica is one of the first countries in Central America to adopt the FHIR standard, led by the Ministry of Health in coordination with the private sector and other state institutions.

Croatia

To exchange data among healthcare institutions central eHealth system CEZIH must be used. CEZIH implements various interfaces and use cases mainly based on healthcare IT standards and recommendations like HL7v3, CDA, FHIR, IHE ... So to connect and exchange data organizations are mandated to use those standards

Croatia

MoH, 2019, LAW ON HEALTH DATA AND INFORMATION, required regulation documents that were scheduled to follow did not happen. Law text available on: https://narodne-novine.nn.hr/clanci/sluzbeni/2019_02_14_269.html

Everything is initiated from the EU level, Croatia, as a small country, does not have the strength to engage on its own.

Cyprus

Regulation = Cyprus National eHealth Law (Law 59 (I)/2019), Funds =European Union's Recovery and Resilience Facility (RRF), the NCP eHealth, and direct funding from EU.

In addition to the national eHealth law, Cyprus, as a member of the European Union, is also subject to the European Health Data Space (EHDS) regulation. Within this framework, Cyprus must amend its national eHealth law to align with EHDS provisions concerning the primary and secondary use of health data. Accordingly, processes for these amendments have commenced and are expected to be finalized in 2026.

Furthermore, through the National eHealth Authority (NeHA), which was established with the enactment of the national eHealth law in 2019, Cyprus is coordinating the Xt-EHR project. This initiative aims to develop implementation guides, technical specifications, and a conformity assessment framework for adopting the European Electronic Health Record Exchange Format (EEHRxF) at the European level. The project focuses on creating implementation guides for various domains, including ePrescription, eDispensation, patient summaries, discharge notes, laboratory reports, and medical imaging results.

These FHIR IGs will also be integrated into the design of the national FHIR IG of Cyprus, which describes the Single EHR Bank (SeHRB), which is another provision of the national eHealth law. The SeHRB is responsible for the storage and management of citizens' health data in Cyprus. Its design has been completed under the leadership of a team of medical professionals, and the development of the logical model has already begun.

Czech Republic

RRF funded national interoperability project

All new use cases including EU priority use cases should be implemented in FHIR. National FHIR based standards will be prepared and published during this year. Pilot implementations are undergoing. Gradual Implementation is expected during next years.

Denmark

https://sundhedsdatastyrelsen.dk/digitale-loesninger/referencearkitektur-og-standarder/udvalg

Denmark

The EHDS regulation is expected to increase the use of FHIR as european standards will be developed. Also national mandatory (but not law) standards are being modernized to utilize FHIR

A recent health care reform is expected to increase national governance by a new agency, among other to further increase the exchange of data, ie by standards.

GDPR and general data protection is considered very important to maintain public trust in sharing

Dominican Republic

No law, regulatory decree or official technical guides are available. There is a National Digital Health Strategy that has those iniciatives as priorities, but no formal effort has been made.

The funding is primarily provided by loans with organizations such as AIDB or The World Bank. No national fund is dedicated to develop the health information exchange environment.

Private sector efforts exists, but the lack of official regulation they are not coordinated to provide solutions for specific or core issues.

It's work in progress, still needs a lot of dialogue.

Estonia

N/A

The Health Information System Statute states that healthcare service providers (tervishoiuteenuse osutaja) must comply with the standards applicable to the information system, as established by TEHIK, when transmitting data. However, the specific data exchange standards are not detailed in the regulation. The data compositions submitted to the Estonian National Health Information System are defined in Regulation No. 53, issued by the Minister of Social Affairs, titled Data compositions to be transmitted to the health information system and the conditions for their submission. In the future, data compositions for new services will be described, which will be based on the FHIR standard.

Finland

There are various specifications related to the central healthcare infrastructure Kanta. Some APIs are FHIR based, most still not. https://www.kanta.fi/en/system-developers/specifications

FHIR use has actually decreased. We used to have active services and platforms provided by the public sector using FHIR, but they have been ramped down.

France

Segur (https://industriels.esante.gouv.fr/segur-numerique-sante), Annuaire Santé, ViaTrajectoire

Next step will be to adapt our national regulation to the European regulation (EHDS)

India

Ministry of Health and Family Welfare have been publishing Guidelines for EHR Standards since 2013. The National Digital Health Blueprint of 2019 recommends the use of HL7 FHIR R4.

Digital Personal Data Protection Act was passed in 2023.

India

Ayushman Bharat Digital Mission aims to develop the backbone necessary to support the integrated digital health infrastructure of the country. It will bridge the existing gap amongst different stakeholders of healthcare ecosystem through digital highways. For data encoding and exchange FHIR R4 has been mandated. There are financial

incentives for adoption as well. However, ABDM is not a regulation in itself. Home page https://abdm.gov.in/ Information on incentive scheme can be found at https://abdm.gov.in/dhis

Digital Personal Data Protection act governs the digital data privacy for Indian citizens and applies to digital health data as well. There are various other regulations on health data published by Ministry of health and family welfare.

Ireland

EHDS Regulations & Health Information Bill

https://www.oireachtas.ie/en/bills/bill/2024/61/ Currently with National Parliament for approval

Israel

Israel's Health Data Portability Law was enacted in July 2024 and is currently in the process of being implemented.

The law, and detailed regulations published in accordance with it, set forth requirements for implementing a FHIR infrastructure for mandatory data portability throughout Israel's health system and other government bodies (Welfare, etc).

This process is funded by the Ministry of Health and its implementation is guided by the Ministry in cooperation with Israel's active FHIR community.

Full implementation of the Law requirements is expected by July 2029.

The Law - https://fs.knesset.gov.il/25/law/25_lsr_4715833.pdf

The Regulations -

https://www.gov.il/he/pages/cfb-data-portability-certification-program

FHIR IL Community website - http://fhir-il-community.org/en

The confidentiality and safety of health data are mainly regulated by the Patient's Rights Law. In addition, the Privacy Protection Law and its regulations administer complementary requirements which the Patient's Rights Law does not address

Italy

Ecosistema Dati Sanitari (Italian EHDS), Italian PNRR (National Recovery and Resilience Plan)

Japan

Ministry EHR data sharing service

Ministry Registered Standard

Latvia

No regulation, only the strategy of Digital Health and no FHIR oriented funding.

Not really; regulation on eHealth (HL7 v3) mainly is stated in Cabinet

Regulation No. 134 (https://likumi.lv/ta/en/en/id/264943). There are some other regulations on standalone systems which are part of ecosystem. But none of regulation mentions any standard.

Nepal

https://digitalhealth.mohp.gov.np/electronic-health-records-2-0/

https://digitalhealth.mohp.gov.np/digital-health-platform/

Health data regulation is emerging topic these days, government as well as related stake holders are working together to share and build it.

Netherlands

EHDS, Wegiz

New Zealand

https://www.tewhatuora.govt.nz/assets/Our-health-system/Digital-health/Health-information-standards/HISO-10083-2020-Interoperability-Roadmap.pdf

Norway

The Norwegian regulation in place only mandates the use of national standards in electronic health data exchange.

The Norwegian regulation needs to adopt international standards

HL7 Norway is expecting to receive around EUR 90 000 to support the adoption of FHIR - with a weight on support for municpial sector who are lagging behind.

No

Helseteknologiordningen - https://www.helsedirektoratet.no/digitalisering-og-e-helse/helseteknologiordningen

We have a recommandation to use HL7 FHIR, but many tend to choose proprietary format - because it is easier.

Philippines

No explicit gov't funding for early adopters, accelerator, etc.., Regulations only:

1. DOH and PhilHealth Joint Administrative Order # 2021-0002 - Mandatory Adoption and Use of National Health Data Standards for Interoperability

2. DOH and PhilHealth Joint Administrative Order # 2021-0001 - Implementation and Maintenance of an Integrated Health Information Systems

3. DOH, PhilHealth, and DICT Joint Administrative Order # 2021-0001 - Implementation of the Standards Conformance and Interoperability Validation

4. DOH and PhilHealth Joint Memorandum Circular # 2021-0001 - Implementation Guidelines on the Processing and Submission of Health data

references:

https://www.philhealth.gov.ph/nhdr/;
https://nhdr.gov.ph

still in planning and capacity building phases

The Philippine Health Insurance Corporation mandates the use of FHIR in the National Health Data Repository.

Poland

Obligatory reporting of medical events

Portugal

No

Saudi Arabia

Council Of Health Insurance Regulation

NHIC

No thanks

Singapore

The adoption of HL7 FHIR is currently bottom up, all driven from Synapxe as we are the HealthTech agency of Singapore MOH, currently we have mandated the use of HL7 FHIR at Synapxe level, and we are aggressively working with MOH to mandate at national level

People recognise the importance of the data quality

Slovakia

Decree No. 107/2015 Coll. and No. 34/2022 Coll. of the MoH of the Slovak Republic,

which establishes standards of health informatics and deadlines for the provision of data

In Slovakia, Act No. 153/2013 Coll. on the National Health Information System (NHIS) serves as the primary legal framework regulating health data. This law defines the scope, operation, and governance of the NHIS, including the responsibilities of healthcare providers, data controllers, and the National Centre of Health Information (NCZI), which is the central body responsible for managing the national eHealth infrastructure. The law outlines rules for data collection, storage, and sharing within the healthcare system. It is important to note that the upcoming European Health Data Space (EHDS) regulation will have significant implications for national health data governance. Slovakia will need to adapt its legal and technical frameworks to comply with the EHDS requirements, particularly in secondary use of health data, interoperability standards and patient data access rights.

Slovenia

Healthcare databases act: mandatory participation in national EHR according to national standards (NIJZ appointed as eHealth authority, no specific technology or standards)

In force since 2015. NIJZ respondible for governance and development of EHR. A new digital health act expected (pending, delayed)

The biggest challenge today is the insufficient focus on clinical data, the cornerstone of health information. Unfortunately, existing systems prioritize administrative and statistical data, leaving this vital aspect overlooked.

Interoperability conditions will hopefully improve once the new law takes effect (anticipated in 2025), as it mandates a national eHealth infrastructure and ensures the required implementation resources.

Spain

At public tenders is mandatory to use FHIR & HL7 and also to have people certified in those standards

We follow EU indications

Sweden

EHDS and EMA will mandate FHIR in a major way.

Switzerland

FOPH (https://www.bag.admin.ch/bag/de/home/gesetze-und-bewilligungen/gesetzgebung/gesetzgebung-mensch-gesundheit/gesetzgebung-elektronisches-patientendossier.html)

eHealth Suisse (https://www.e-health-suisse.ch/)

DigiSanté (https://www.bag.admin.ch/bag/de/home/strategie-und-politik/nationale-gesundheitsstrategien/digisante.html)

DigiSanté: https://www.bag.admin.ch/bag/de/home/strategie-und-politik/nationale-gesundheitsstrategien/digisante.html

https://www.ehealthstandards.ch/en/index.html

https://www.e-health-suisse.ch/semantik/datenaustausch/austauschformate

We have in the Swiss EPR (Electronic Patient Record) regulation for FHIR structured documents and just one API for AuditEvents. For other areas FHIR is only starting to be used and not yet mandated by regulation.

Taiwan

https://web.pcc.gov.tw/prkms/tender/common/bulletion/n?querySentence=FHIR&tenderStatusType=%E6%8B%9B%E6%A8%99&tenderStatusType=%E6%B1%BA%E6%A8%99&sortCol=TENDER_NOTICE_DATE&timeRange=113&pageSize=10

Thailand

It's not like a national mandate, but there're several departments from several ministries require organization to send data in a standard format. For example, MorPrompt (the HIE within MOH) use their standard API, which is a simplified version of FHIR. Or HealthLink (the HIE between university hospital) use FHIR IPS.

Turkey

There is strong regulation to share the electronic health record, but it is not enforcing or based-on the standards.

Health data is not shared between healthcare organization in Turkey. Public or private, all healthcare organizations are required to share the data with the Ministry of Health through the proprietary services and data models.

Uganda

Not applicable

It's mostly in big hospitals to use the health system

United Arab Emirates

https://mohap.gov.ae/documents/d/guest/riayati_integration_terminology_and_coding_standards_v2-1-pdf

United Kingdom

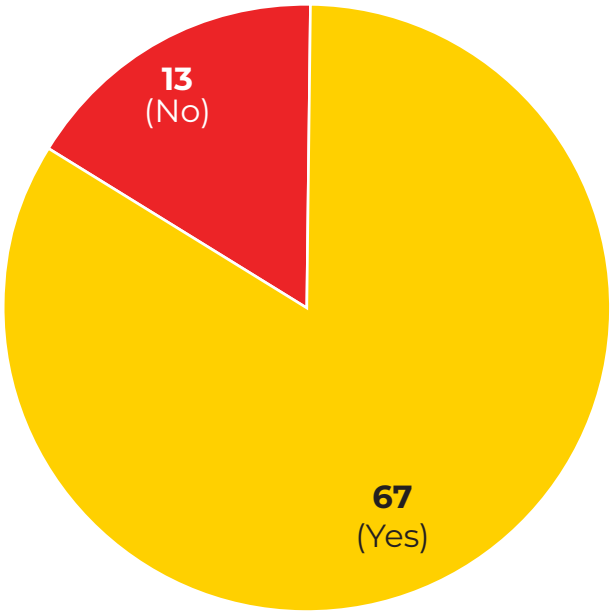

Health care is public funded so this includes a lot of IT spending, including on some FHIR projects, large and small. But there is nothing major in the way of grants to adopt FHIR or interop currently that I am aware of. Small programmes do come and go. There are regulations encouraging open APIs, but nothing that says you have to use FHIR.

United States

https://www.healthit.gov/topic/certification-ehrs/about-onc-health-it-certification-program

ASTP sets the technical requirements for EHRs through the Certification Program. Adoption and use of certified systems is largely driven by Centers for Medicare & Medicaid Services (CMS), e.g., by requiring providers to use certified technology to participate in Medicare.

NATIONAL STANDARDS

Q. Is there a national organization in your country responsible for health data standards?

The vast majority of the respondents (67 of 80) stated there is a national organization in their country for health data standards. The wording of the question was changed somewhat in 2025, so a comparison to 2024 and 2023 has not been made.

Respondents were asked to provide the link of the organization(s).

TYPE OF FHIR USE CASES

Q. For which of the following use cases are FHIR specifications (being) developed in your country? Choose as many as you like.

FHIR specifications have been, or are in the process of being, developed for a variety of use cases. The use cases mentioned by the most respondents include the following: prescriptions/pharmacy (39), terminology (34), diagnostic orders/reports (29), document exchange (28), referrals/continuity of care (28) and immunizations (26). This was a new question in 2025.

Other single mentions were as follows:

1. Chronic Consition Management, Patient Summary, Smart FORMs (SDC, FHIR Questionnaires for Assessments)
2. Scheduling
3. Summary, others
4. Others
5. Infra & security; allergy intolerance
6. Invoice and Claim
7. Master Patient Index; Health declaration; Estonian National Health Information System base services; Allergy
8. Scheduling, Social welfare services
9. Notebook

INTERNATIONAL SPECIFICATIONS

Q. Which international specifications serve as the basis for your national FHIR specifications? Please select all that apply. Leave empty if none.

The most common response when asked which international specifications serve as the basis for their national FHIR specifications was International Patient Summary (42 respondents) followed by European Implementation Guides (26 respondents) and International Patient Access (7 respondents). This was a new question in 2025.

Other single mentions were as follows:

1. IHE Profiles based on FHIR
2. Core-CI is based on the standar but we have a National Summary Guide that is based on IPS
3. None - but IPA compability has been added to the Core
4. IHE profiles (MHD, DCTM, ...)
5. IHE MHD, Vital signs profiles from FHIR core, genomics reporting
6. Base FHIR R4
7. HL7 FHIR & US CORE IG
8. In Latvia FHIR based systems speciafications are mainly based simply on FHIR specification, not any specific IGs.
9. Business needs in the relevant project + other possible implmentations guides
10. FHIR R4
11. HL7 FHIR, V3 eClaims
12. We develop our national spec based on relevant implementation guides
13. Currently, Slovakia does not have officially published national FHIR specifications, so no international specifications have been adopted as a formal basis yet.
14. National regulations on EHR (extedned patient demographics, including data on next-of kin, legal guards and authorized proxies; management and authorizations of health care teams
15. In planning IPA and European Implmementation Guides
16. Ukrainian national requirements for medical records
17. Domestic Standard

FHIR TERMINOLOGY

Q. Is there a national FHIR terminology server available in your country?

Roughly half of respondents (39 of 79) said Yes, there is a national FHIR terminology server in production or development in their county. Another 27 respondents said No, but it's in planning. This was a new question in 2025.

Yes, in production

NATIONAL STANDARDS COMMENTS

Q. Is there anything else you'd like to share on national standards development in your country?

Respondents were given the opportunity to provide additional information and open-ended comments about national standards development in their countries.

Austria

Overview about the current activities: https://fhir.hl7.at/index_other.html

Belgium

Belgium has many different government agencies that are often mismatched. As a result, many different projects are set up side by side, causing a fragmentation of the standard.

Brazil

Brazil has deployed a national Terminology Server using Open Concept Lab www.terminologia.saude.gov.br

Chile (2)

National Core only depends on FHIR Standar 4.0. We have a Summary National guide with dependancy on our Core and IPS, We also got Gravity-CL. All the othes especific Guides depends on Core

We have progress a lot in the last 5 years

Colombia

In Colombia, 80% of healthcare provider organizations and point-of-care locations are private. There is significant progress in the adoption of HL7 FHIR in private healthcare organizations.

- Insurance company SURA: 10 million patients, network of 1,900 medical offices and organizations, in production since 2016 (HL7 FHIR DSTU2), updated in 2023 (HL7 FHIR R4). Implemented on Google Healthcare API.
- Ecopetrol (the Colombian oil company): 65,000 employees, network of 1,400 medical practices and organizations, in production since 2025 (HL7 FHIR R4), Implemented on Azure Health Data Services.
- Insurance company Keralty: 8 million patients, internal network of more than 50 software solutions, under construction since 2024 (HL7 FHIR R4).

  All these projects have been supported by the HL7 affiliate in Colombia.

Costa Rica

The National Digital Health Committee was recently created, and its scope includes promoting standards.

Croatia

Adoption depends on a few major health IT players, and since we are not stimulated from the government level, we are driven only by professional motives.

Cyprus

Cyprus is active in implementing the Directive 2011/24/EU on patients' rights in cross-border healthcare an EU Citizen that my travel to another EU country can receive medical care. The EU cross-border healthcare services in Cyprus will go live in 2025. More information can be found here: https://wiki.ncpeh.ehealthlab.cs.ucy.ac.cy/index.php/Cross_Border_Services_(Main_Page)

Estonia

In Estonia, we currently do not have any live services that exchange data based on the FHIR standard. However, we do have a Data Viewer on the Health Specialist Portal, where data from CDA documents is mapped to the FHIR standard on the fly in order to display health information to healthcare professionals in a more modular way. All new services for the health information system are being developed based on the FHIR standard (R5). Currently, the following services are in development: the Master Patient Index, Medication Scheme, Health Declaration, Medical Certificate, base services of the Health Information System, and soon also Allergies. In addition, we have a Terminology server in production.

Germany

FHIR development is widely decentralized

Germany

Still too diverse, not federated enough, leading to not always consistent national specifications

String will to Use FHIR

India

Bureau of Indian Standards is encouraging adoption of EHR Standards recommended by our Ministry. Wolters Kluwer is offering a FHIR Terminology Server: https://www.wolterskluwer.com/en/solutions/health-language/fhir-terminology-server

Ireland

New Data Strategy being finalised which will assist adoption of FHIR, and Governance Structures

Latvia

SNOMED GPS is used now for cross border exchange and laboratory data exchange within Latvia

Nepal

We are trying to implement the national standard but there are numerous challenges we are facing, we are trying to mitigating those and implement a proper standard .

Netherlands

Lots of legacy to migrate from/stay compatible with

New Zealand

HL7 New Zealand had a FHIR Implementation Work Group that has representatives from Health NZ and vendors.

Norway

I would like to see a national FHIR terminology server in Norway

Singapore

We have made huge progress in large scale Health IT systems eg Healthier SG. Now our mission is to work out at the national level mandate level, and also expand our adoption in research domain eg use of HL7 FHIR for OMOP

Slovenia

Link to description of national FHIR-based operational data repository: https://www.better.care/blog-en/deploying-a-national-fhirbased-operational-data-repository-insights-from-slovenia/

Slovenia

Slovenia is using OpenEHR for clinical data. Since 2023, FHIR is used for demographic and administrative data

Switzerland

We are cooperating with the different swiss ehealth standard organizations on https://www.ehealthstandards.ch/

Thailand

It's in a stagnant phase now, partly because of political instability. Many have become disengaged, and the country lacks active development

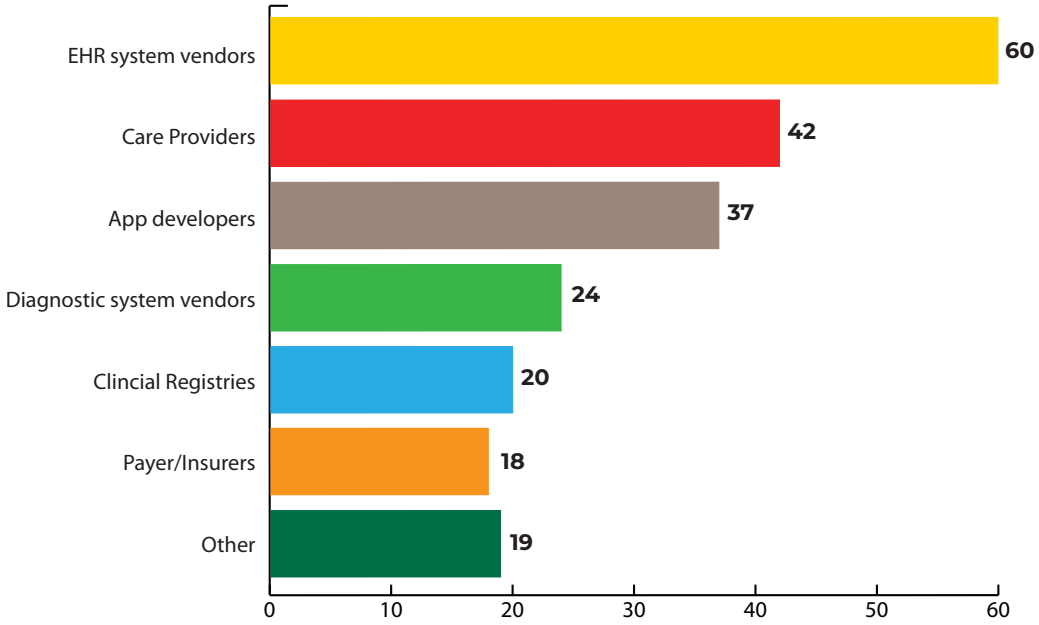

Uganda

Adopting standards at a country level is still a challenge bse of the training capacity needs that are needed in implementing these standards

Uganda

Facilities are using systems

WHO IS ADOPTING FHIR

Q. Who are the main stakeholders adopting FHIR in your country?
(multiple choice; multiple answers accepted)

Among the 82 respondents, the three groups most often cited as adopting FHIR were: EHR vendors (60), Care providers (42) and App developers (37). Consistent with 2024 and 2023, EHR vendors remain the most often cited group. Care providers edged higher in 2025, to be named by the second largest number of respondents, slightly higher than App developers.

2024 – 1. EHR vendors (30 of 38); 2. App developers (25 of 38)
2023 – 1. EHR vendors (20 of 32); 2. App developers (19 of 32)

Other single mentions were as follows:

1. National Infrastructure e.g National Terminology ELGA
2. Data scientists in hospitals & the government
3. Jurisdictional systems
4. Goverment
5. Goverment
6. Big technology companies such as Microsoft, Google and AWS. Who in Colombia participate in a FHIR accelerator project (led by the HL7 affiliate) called APIS (Alliance to Promote Healthcare Interoperability - in Spanish).
7. National agencies
8. Government agencies (centralized data storage)
9. Institutional (GRADES, French e-health agency)
10. Scientists
11. ABDM - an initiative of the Government of India
12. Health Management Organizations

PRIMARY DRIVERS OF FHIR ADOPTION

Q. What are the main drivers for FHIR adoption in your country?
(multiple choice; multiple answers accepted)

Respondents most often mentioned Innovation (52) and Regulation and grants (52) when given multiple-choice options about the main drivers for FHIR adoption. This is consistent with 2024 when respondents noted these same drivers equally (23 of 32).

Other single mentions were as follows:

1. Patient empowerment; efficiency gain
2. Improved data access
3. Modernization of data exchange
4. Use cases for which old, document based approach is not a good fit
5. Claims reinbursement
6. Improving business workflows
7. Improving systems (if they have to change, otherwise never change a running system)

SUCCESSFUL FHIR USE CASES

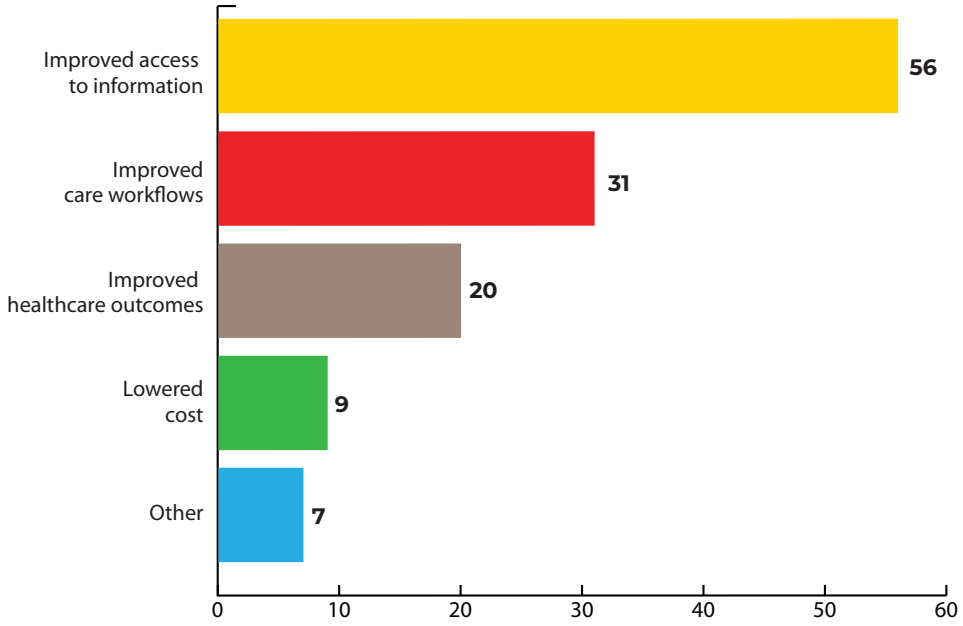

Q. Are you aware of successful FHIR use cases in your country?

The majority of respondents (63 of 82) were aware of successful FHIR use cases in their countries, while 19 were not.

This proportion is consistent with previous years.

2024: 29 of 38 respondents were aware, while 9 were not.
2023: 26 of 32 respondents were aware, while 6 were not.

FHIR USE CASE MAIN ACHIEVEMENTS

Q. What were the main achievements of this/these FHIR use case(s)? (multiple choice; multiple answers accepted).

Among the 63 respondents who said they were aware of successful FHIR use cases in their country, 56 cited the **main achievement being Improved access to information**. This was also the leading achievement cited in previous years.

Other single mentions were as follows:

1. Improved quality of data, use of terminology
2. Get Quality Data for Analisys and Secondary use
3. Research
4. Faster integration with care provider systems
5. Collaboration
6. Improved timeliness of care
7. Improved public health reporting

SPECIFIC SUCCESSFUL FHIR USE CASES

Respondents were asked to share successful FHIR use cases.

Argentina

ePrescription

Australia

The National Clinical Terminology Service has been in use since 2016, its FHIR native, and has improved the adoption of clinical terminologies, in particular SNOMED CT across the health ecosystem. National Cancer Screening Register for Bowel, Cervical Screening. Mobile Gateway for MyHealth Record- the National Electronic Health Record.

Austria

Mobile App for ELGA eVaccination;
Various product implementations by vendors;
Science Programs for CQL;

Bangladesh

Using FHIR, we aim to build a data-driven view of the overall healthcare situation.
This will support better planning and efficient resource and fund mobilization.
It will also help identify gaps and prioritize areas for improvement.
Ultimately, it will strengthen our national health system.

Belgium

Vaccination registry

Belize

The Belize Health Information System and National Health Insurance system

Bosnia and Herzegovina

Patient portal, Diagnostic imaging and laboratory integration.

Brazil

Brazilian National health Data Network

Chile

Specialty care waiting times, national electronic prescriptions

Reference workflow (national Proyect)

Colombia

- SURA insurance company: 10 million patients, network of 1,900 medical practices and organizations, in production since 2016 (HL7 FHIR DSTU2), updated in 2023 (HL7 FHIR R4). Implemented on Google Healthcare API.
- Ecopetrol (Empresa Colombiana de Petróleos): 65,000 employees, network of 1,400 medical offices and organizations, in production since 2025 (HL7 FHIR R4), Implemented on Azure Health Data Services.
- Keralty Insurance Company: 8 million patients, internal network of 50+ software solutions. It is being implemented on Google Healthcare API.
- Secretaría Distrital de Salud de Bogotá: 11 million patients, network of more than 800 healthcare organizations, under construction (HL7 FHIR R4, previously on HL7 CDA R2). It is being implemented on an INDRA Company solution.

Costa Rica

Notification to the Ministry of Health of notifiable diseases, laboratory results, and immunizations.

Taiwan

https://twcore.mohw.gov.tw/ig/pas/
https://twcore.mohw.gov.tw/ig/emr/

Turkey

National Chronic Disease Management System of Turkey is being empowered by a FHIR server through some FHIR profiles developed for the care workflows for different chronic diseases.

Ukraine

National E-Health system -
The project involves development of the Ukrainian national health system to ensure the availability of high-quality medical data in real time through REST API. The system employs electronic digital signatures and blockchain-like algorithms to ensure data integrity and security.

It's one of the world's largest HL7 FHIR-based projects in production, with over 36,5 million patients. The system was built to meet the high-load demands (1 000 RPS current system load)

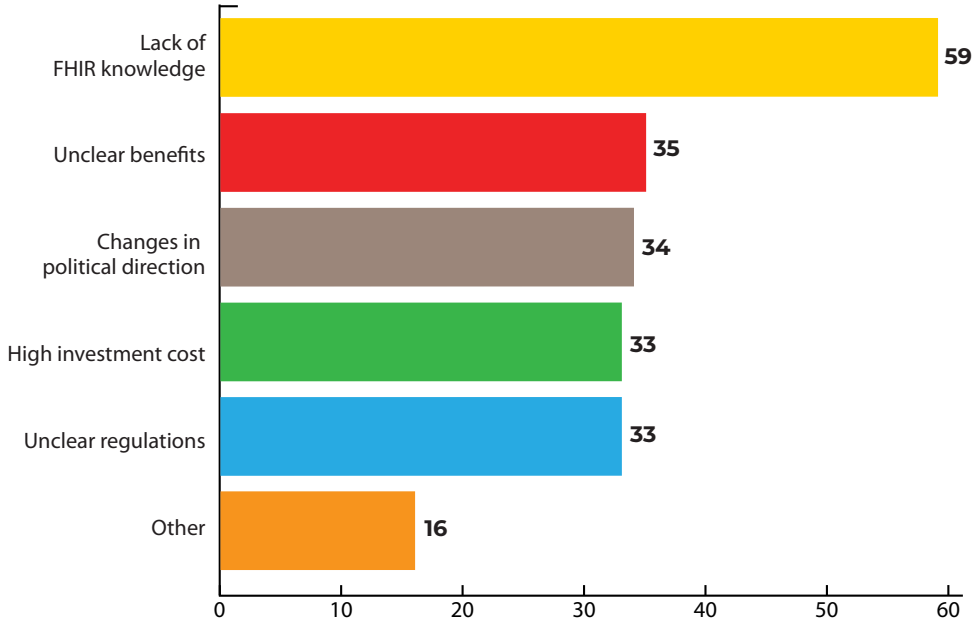

United Arab Emirates

Patient Flows, Insurance Approvals

United Kingdom

A standout is the YHCR (Yorkshire & Humber Care Record), https://yhcr.org/. But lots of small successful projects.

CHALLENGES TO ADOPTING FHIR

Q. What are the biggest challenges for FHIR adoption in your country?
(multiple choice; multiple answers accepted)

Lack of FHIR knowledge was cited by the majority of respondents (59 of 82) as the biggest challenge for FHIR adoption, which is consistent with previous findings. Other challenges were mentioned by almost an equal number of respondents: Unclear benefits (35), Changes in political direction (34), High investment cost (33) and unclear regulations (33). An updated list of challenges was presented to respondents in the 2025 survey, so direct comparisons were not made.

Sixteen (16) respondents provided other answers as follows:

1. Migration path for already existing eHealht infrastructure & data to FHIR
2. Aligning to Belgian FHIR profiles
3. Cases of corruption and private interests of some individuals and government contractors, which interfere in political decisions.
4. Resistance to change
5. We already have information flowing through proprietary channels
6. Local vs global health care systems
7. Conservatism
8. Low digitization of clinical records
9. Requires strategic and governance directions
10. Legacy
11. FHIR experts
12. When people hear HL7 FHIR, the initial perception is that it must be very difficult
13. Ignorance
14. Concerns as regards capacity and maturity of EHR (given extremely complex regulatory and busines landscape in healthcare)
15. Many regions each one with their own policy
16. Never change a running system

LOOKING FORWARD

Q. Are there any FHIR implementation use cases in the near future that you are looking forward to?

Respondents were given the opportunity to share FHIR use cases they are looking forward to in the near future.

Argentina

Buenos Aires - 40 M patients- ePrescription, documents

Australia

Implementation of Patient Summary to support connected care/transitions of care within Australia, increased use of FHIR Questionnaires to support Assessments, tools, govt forms, eRequesting for diagnostics, Chronic Condition Management Plans, Modernisation of the National eHealth Record Infrastructure and Health Information Exchange

Australia

e-requesting, patient summary

Austria

Adoption of FHIR in ELGA

Belgium

FHIR on person-centric health data vaults

1) implementation of a problem list consolidator in the EHR that consolidates a received problem list (fhir collection bundle) with the own problem list (both snomed coded)

2) implementation of automatic OPAT (Outpatient Parenteral Antimicrobial Therapy) traject where patient information is send as a fhir document to home nurse who follows up on patient and reports FHIR Questionnaire(Response) back to the caretaker in the hospital. The responses of the FHIR questionnaire are automatically registered in the EHR due to the link of snomed and loinc codes and the ehr modules.

Bosnia and Herzegovina

National level integration and data exchange.

Brazil

Create Brazilian fhir accelerator

Chile

Yes.... Yes, surgical waiting times, patient summaries, diary, prescriptions, among others.

Patient History Summary, primary care agenda, immunisations, surgery waiting lists

Colombia

In addition to the projects mentioned above.

There are some cases of HL7 FHIR adoption in small but innovative scenarios:

Use of FHIR as a Data Governance model (DM on FHIR) in the Blood Bank of Bogota - District Institute of Science, Biotechnology and Innovation in Health (IDCBIS), 2025. With the support of the HL7 affiliate in Colombia.

Use of FHIR for interoperability in the City Cancer Challenge project in the city of Cali (2.3 million inhabitants), 2025. With the support of the HL7 affiliate in Colombia.

Cook Islands

No

Costa Rica

Yes, the implementation of the IPS between the state's largest health provider and the state's insurance provider.

Lab data

Health Data Interoperability across de national health system

Croatia

Integration of emergency service

Expanding from Oncology to other medical specialties (national data exchange)

Cyprus

The EU cross-border healthcare services in Cyprus (EU patient summary and ePrescription). Additionally, the implementation activities described in the RoadMap of the National eHealth Authority including the Single EHR Data Bank.

Czech Republic

Yes, discharge reports, lab and imaging orders and reports, ps,

Denmark

More FUT - more SMART/IPA - more IHE MHD (interfacing XDS)

Dominican Republic

The National EHR

France

Yes

FHIR Document following HL7 Europe specifications

Germany

IPS

Imaging

EHR Lab

eHeilmittel,eHilfsmittel,eVSDM, MIO Lab Report, MIO eMP, PKA, HKP, PTV

Guatemala

Yes

Our own proyect on Diagnostic Images

India

Unless EHR adoption is legally mandated throughout India, only sporadic efforts will be seen.

Realtime Health claims verification, adjudication and settlement. Already there is work underway and so far the progress has been good.

Ireland

Shared Care Records use case

Israel

Implementation of a National Patient Consent Management System

Japan

IPS, FHIR bulk data

Latvia

Referral and booking systems

Nepal

Yes, implementation of National Health Data Exchange

Netherlands

Birth Care

New Zealand

NZ Patient Summary (IPS Derivation); FHIR Pathology Results API

Norway

Will be presented on this years DevDays!

Use of FHIR for PhPID request and subscription, Reimbursment, limitations and pricing

The central national medication registry - that will share data according to the European SPOR IG. Planned production before summer.

Philippines

Philippines National Health Data Repository Framework (NHDR) FHIR Implementation

Claims

Poland

Ordering diagnostice services

Portugal

Core

Saudi Arabia

Yes / Lab order and Lab result with IHE

Clinical exchange and IPS

Singapore

We are building HL7 FHIR based terminology server for internal use by one national IT system

Slovakia

The upcoming update of the National Health Information System (NHIS) in Slovakia is expected to include new digital health services that will require FHIR implementation, particularly in the context of complying with the European Health Data Space (EHDS) Regulation.

Slovenia

We hope we will be able to implement FHIR & OpenEHR convergence as soon as possible

Further development of administrative features based on health care teams for different use cases

Spain

Yes

Sweden

EHDS-related implementations.

Switzerland

We'll see what comes with DigiSanté!

Patient access to structured data

Thailand

FDA implementation of IDMP

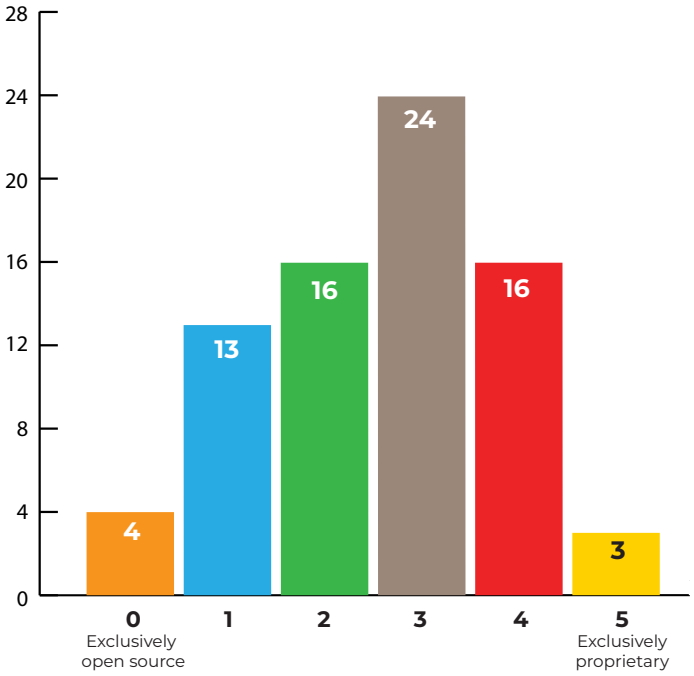

Uganda

Exchange of Patient Shared Health Record

United Arab Emirates

Core standards for IPS

OPEN SOURCE VS. PROPRIETARY FHIR

Q. To what extend are open source vs. proprietary FHIR software being used?

When asked the extent to which open source versus proprietary FHIR software is being used in their county, the majority fell to the right of the middle, leaning a bit more toward Exclusively proprietary, with a nearly equal amount reporting Exclusively open source and Exclusively proprietary.

FHIR IMPLEMENTATION COMMENTS

Q. Is there anything else you'd like to share on FHIR implementation in your country?

Respondents were invited to share open-ended comments about FHIR implementation in their respective country.

Australia

The establishment of a Government funded accelerator has greatly increased the adoption of FHIR within Australia. Over 1100 members of the community with active participation across government, consumers, clinicians, clinical orgs, and industry.

Chile

We have been working hard on the development of Implementation Guides, piloting and training.

Colombia

From the adoption of FHIR in Colombia, as a representative of the HL7 affiliate, it is important to highlight:

- The support of vendors and large technology companies such as Microsoft, AWS and Google (which have FHIR services in their computational clouds) has been invaluable in accelerating adoption.
- Although the national government has opted for the use of FHIR, but has not made significant progress, this has not been an impediment to the adoption of FHIR.
- Due to the characteristics of the health sector in the country, it has been the private organizations (mainly payers and insurers) who are leading the adoption process.
- In addition to interoperability, the use of FHIR for the development of software applications (SMART on FHIR) or FHIR as a data governance model has enormous potential.
- The ability of the in-country HL7 affiliate to lead advocacy, education, profiling, compliance verification and adoption support is critical to strengthen the user community and make things happen.
- The support and collaboration of other more experienced affiliates in the region (such as HL7 Argentina) and key individuals (such as Diego Kaminker) is essential to move forward.

Cook Islands

No

Costa Rica

We look forward to the future of interoperability with optimism :-D

No

Cyprus

FHIR is expected to be adopted as the main interoperability standard for the national EHR system of Cyprus by law. NeHA will help actively system implementers for the adoption.

Finland

It feels that right now the EHDS regulation is holding us back a bit. There's plenty of waiting to see what comes out.

France

It's starting

Guatemala

NA

India

Today the country has adopted FHIR Resources, but the exchange paradigm is proprietary and not standard FHIR

Mentioned before.

Ireland

Requires national governance structures to drive implementation guides and adoption of FHIR

Israel

Very excited to begin the wide implementation of FHIR throughout our healthcare system

Latvia

With no regulation in place on FHIR as a data exchange standard it is 100 times harder to move on with time demanding implementation.

New Zealand

Major national health integration project (Hira) discontinued due to funding issues.

Norway

Lack of upgrades from Microsoft

Philippines

FHIRlab is our testbed

Portugal

No

Saudi Arabia

Slow but steady.

No thanks

Singapore

FHIR saves tremendous IT implementation cost

Slovenia

Current implementation is still insufficient/non-existent at the most important part: clinical data

Spain

No

Thailand

I think it'll be like this for the next few years.

Uganda

No

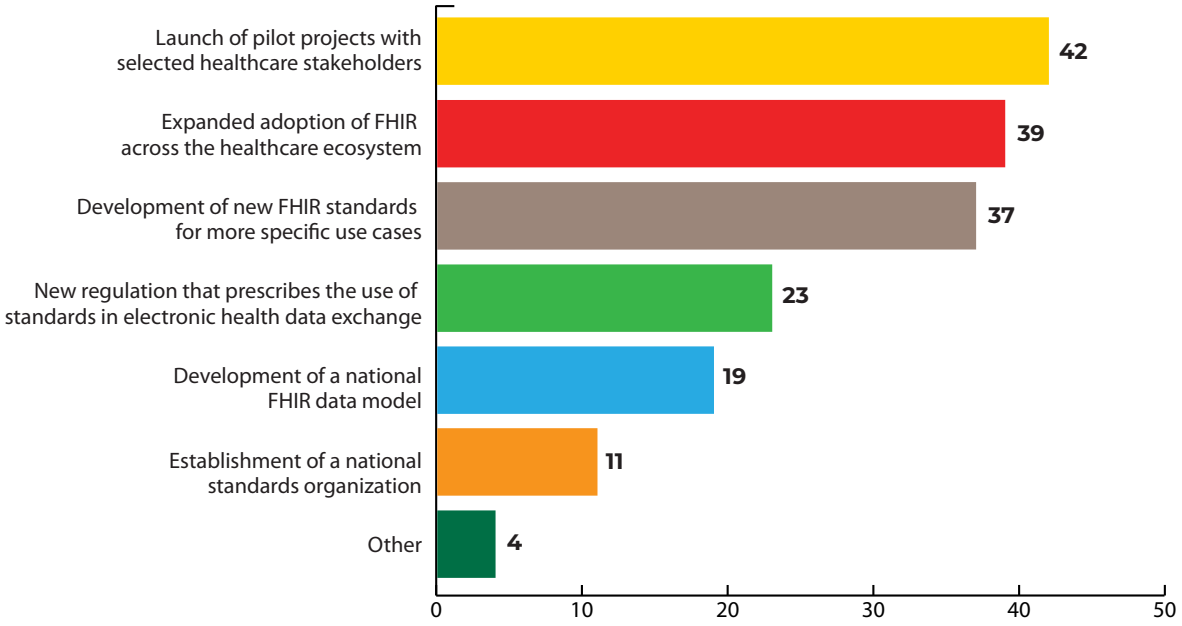

Uganda

Knowledge on FHIR implementation is one of our major challenge

United Kingdom

It is a time of governmental change, so we hope to see that help FHIR adoption

MAJOR ACHIEVEMENTS OF FHIR ADOPTION

Q. What were the major achievements regarding FHIR adoption in the last year in your country? (multiple choice; multiple answers accepted)

The three most often mentioned major achievements of FHIR adoption in the past year were as follows: Launch of pilot projects with selected healthcare stakeholders (42), Expanded adoption of FHIR across the healthcare ecosystem (39) and Development of new FHIR standards for more specific use cases (37). This was a new question in 2025.

Four (4) respondent provided other answers as follows:

1. FHIR terminology server
2. Establishment of a national terminology team at the Ministry of Health
3. Last year was a year of doubts on standards to be used for next use cases. Doubts unfortunately are still in place.
4. Not in the last year, the big use of FHIR for eClaims was 4 years ago.

MAJOR ACHIEVEMENTS OF FHIR ADOPTION

	ESTABLISHMENT OF A NATIONAL STANDARDS ORGANIZATION	DEVELOPMENT OF A NATIONAL FHIR DATA MODEL	NEW REGULATION THAT PRESCRIBES THE USE OF STANDARDS IN ELECTRONIC HEALTH DATA EXCHANGE	DEVELOPMENT OF NEW FHIR STANDARDS FOR MORE SPECIFIC USE CASES	LAUNCH OF PILOT PROJECTS WITH SELECTED HEALTHCARE STAKEHOLDERS	EXPANDED ADOPTION OF FHIR ACROSS THE HEALTHCARE ECOSYSTEM

SATISFACTION WITH FHIR ADOPTION RATE

Q. "Regarding last year's FHIR adoption, we have made..." Which statement is most applicable to your country?

When asked about the progress of FHIR adoption last year, most respondents (30) said Quite the progress they expected. Following that, 24 said Less progress than expected. About an equal number combined (23) said More, or Far more, progress than expected. This was a new question in 2025.

ADOPTION RATE OF FHIR

Q. How satisfied are you with the adoption rate of FHIR in your country?

When asked how satisfied they are with the FHIR adoption rate in their county, most respondents (35) reported being Neutral. The remaining responses were balanced slightly higher on the dissatisfied side of the scale. This was a new question in 2025.

NEXT STEPS IN THE COMING YEAR

Q. What next steps do you expect will take place in the coming year regarding FHIR? (multiple choice; multiple answers accepted)

The most often mentioned next steps expected to take place in the coming year with regard to FHIR were as follows: Expanded adoption of FHIR across the healthcare ecosystem (61), Development of new FHIR standards for more specific use cases (53) and Launch of pilot projects with selected healthcare stakeholders (44). This was a new question in 2025.

One (1) respondent provided other answers as follows:

1. Working with national agencies to ensure continuous development and adoption

THESIS AGREEMENT

Q. "Within the next three years, I anticipate that in our country we will reap the benefits of FHIR adoption, leading to significant cost savings, enhanced care coordination, and a more robust digital health ecosystem—paving the way for the future of healthcare innovation." Please select to what extend you agree with this thesis.

When asked the level of their agreement, the majority of respondents (51 of 81) said they either Agree or Strongly agree with the thesis above. Only 6 respondents said they disagree with the statement. This was a new question in 2025.

HL7® International

Founded in 1987, Health Level Seven® International (HL7) is an ANSI-accredited non-profit organization that empowers global health data interoperability by developing standards and enabling their adoption and implementation. In alignment with HL7's vision of "a world where everyone can securely access and use the right health data when and where they need it", HL7 created HL7 FHIR®, leveraging the latest web standards and applying a tight focus on implementability. HL7 affiliates have been established in more than 30 countries, and HL7 members represent approximately 500 corporate members, which include more than 90 percent of the information systems vendors serving healthcare. HL7 collaborates with other standards developers and providers, payers, philanthropic, and government agencies at the highest levels to ensure the development of comprehensive and reliable standards and successful interoperability efforts.

Firely provides all the software, training, and expertise to bring FHIR to life. We are one of the initiators of FHIR. The Firely team has been involved in FHIR since the beginning and is continuously contributing to the standard. Our 100% FHIR-based solutions enable compliance and innovation in one go. Our flagship products are Firely Server, Simplifier.net, and the open-source .NET SDK. Our software powers FHIR APIs and systems around the world. Governments, hospitals, payers, and HealthTech companies rely on our solutions for their FHIR capabilities. Besides software products, we offer training and consulting services to support our customers with their FHIR implementation. We play a prominent role in the FHIR Community and are the driving force behind FHIR DevDays, the world's foremost FHIR event.
