Open source vs. proprietary FHIR 103
FHIR implementation comments 104
Major achievements of FHIR adoption 108
Adoption rate of FHIR 112
Satisfaction with FHIR adoption rate 113
Next steps in the coming year 114
Thesis agreement 118

Acknowledgements

BACKGROUND AND PURPOSE

Each year, HL7® International and Firely invite a group of national experts to help map how HL7 FHIR® is evolving worldwide. Now in its fourth year, the global survey continues to provide insight into the current state, progression and practical use of FHIR adoption across countries and regions.

The 2026 survey was designed to help identify how FHIR is being used, which versions and specifications are being implemented, and the real-world drivers and barriers shaping adoption. New areas of focus this year included dominant hurdles to FHIR certification and the emerging "AI paradox" in interoperability, as organizations explore the potential of artificial intelligence while continuing to address foundational data exchange challenges.

This is not a generic survey. The findings are used by HL7, policymakers, national programs and the broader interoperability community to better understand where alignment is occurring, where fragmentation remains and how FHIR adoption is advancing globally. To ensure broad community awareness and engagement, the results will be shared at HL7 FHIR DevDays 2026.

SAMPLE AND METHODOLOGY

Survey responses were collected between February and April 2026. The online survey was distributed to HL7 affiliates, national standards organizations and other informed stakeholders worldwide, with the goal of obtaining input from at least one knowledgeable respondent per country.

In total, 101 responses were collected from 63 distinct countries, marking a significant increase from 2025, when 82 responses were collected from 52 countries, and a dramatic increase from the initial study in 2023, when 32 responses were collected from 24 countries.

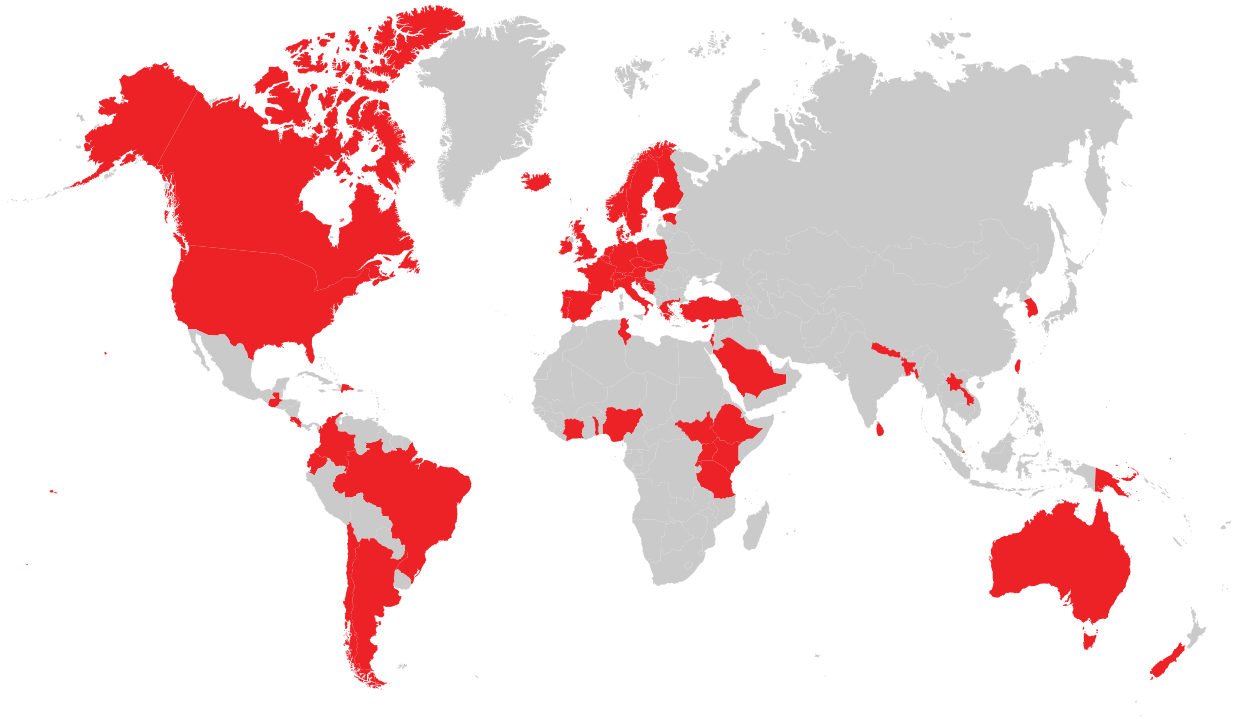

Many of the survey questions were open-ended, encouraging participants to share insights that reflected the unique circumstances in their respective countries. However, not all responses from the same country aligned, highlighting differences in perspective, implementation status or national context. Given the modest number of responses, results are provided in whole numbers and should be interpreted primarily as qualitative rather than quantitative.

Detailed Findings

PARTICIPATING COUNTRIES

101 responses were received from 63 unique countries. Multiple responses were received from 19 countries. The response was remarkably higher than in the past reports:

2025: 82 responses from 52 countries
2024: 38 responses from 29 countries
2023: 32 responses from 24 countries

WHO RESPONDED?

Of the 101 respondents, 21 were from HL7 affiliates and 70 were from other organizations. This compares to:

2025: 17 HL7 affiliates and 39 from other organizations
2024: 12 HL7 affiliates and 26 from other organizations
2023: 13 HL7 affiliates and 19 from other organizations

FHIR CURRENT USE

Q. To what extent is FHIR already being used to exchange healthcare data in your country?

The majority of respondents, 62 of 101, or 62%, said FHIR is being used for a few use cases. This is lower than in 2025 when 58 of 82 respondents (71%) said the same. **There is a shift in 2026 toward FHIR being closer to the main standard** – 20% in 2026 versus 13% in 2025.

Contradictions, as noted by an asterisk, among respondents from the same country were common.

FHIR VERSION USE—DSTU2

Q. Among those who are using FHIR within your country: What version of FHIR are they using?

Half of respondents (49 of 101) are not using **DSTU2**, and another 41 don't know if it's being used within their country. None of the respondents said **DSTU2** is their main standard.

FHIR VERSION USE—STU3

Q. Among those who are using FHIR within your country: What version of FHIR are they using?

Roughly one-third of respondents (33 of 101) are not using **STU3**, this is down from about half of respondents not using **STU3** in 2025. Nearly half of respondents (47 of 101) don't know if it's being used within their country. Only one country, three respondents from the Netherlands, reported that they are using **STU3** as their main standard, which is consistent with 2024 and 2025.

FHIR VERSION USE—R4

Q. Among those who are using FHIR within your country: What version of FHIR are they using?

The highest number of respondents in 2026 (36 of 101, or 36%) said they are using **R4** as their main standard. **This percentage has been decreasing steadily since 2024.** (58% in 2024; 40% in 2025).

FHIR VERSION USE—R5

Q. Among those who are using FHIR within your country: What version of FHIR are they using?

More than a third of respondents (35 of 101) said they don't know if **R5** is used in their country, while 24 others said it was not used at all. Respondents from eight countries said **R5** is the main standard: Costa Rica*, Czech Republic, Dominican Republic*, Estonia, France*, Kenya, Nauru, and Poland. There were contradictory responses for the countries noted with asterisks.

FHIR ADOPTION RATE CHANGE

Q. What change do you expect in the rate of adoption of FHIR in the coming years in your country?

More than half of respondents (53 of 100) expect a **strong increase** in the rate of adoption of FHIR. This represents 53%, which is consistent with 2025 (54%), and a substantial increase in the proportion of respondents who expected a strong increase in adoption over 2024 (39%).

CURRENT REGULATION

Q. Is there any regulation in place that mandates the use of standards in electronic health data exchange in your country?

Consistent with previous years, the majority of respondents (76 of 101) reported that their respective countries had regulation in place for the mandated use of standards in electronic health data exchange. It should be noted, however, that there were contradictions between respondents from some countries as noted by asterisks. The wording of this question changed slightly beginning in 2025.

REGULATION MENTION FHIR

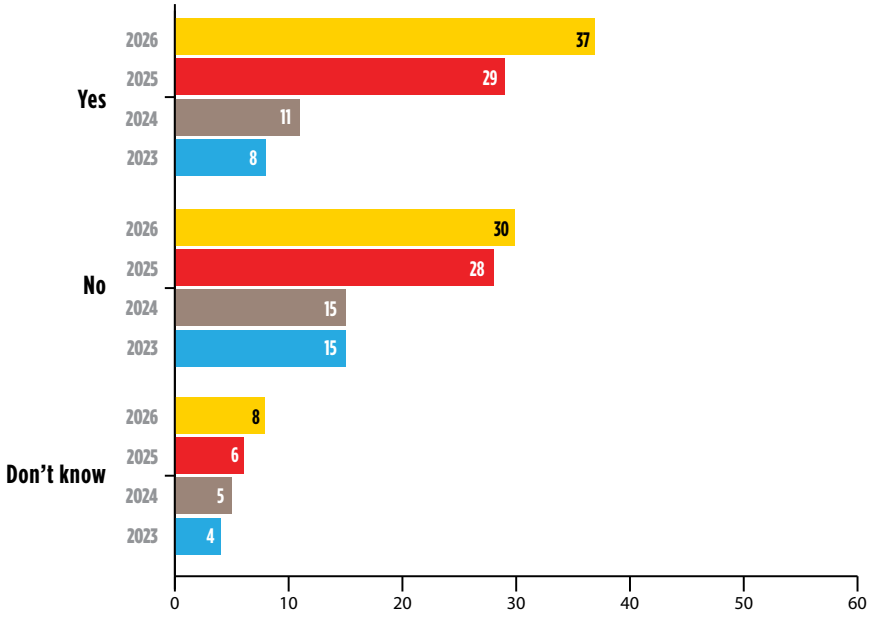

Q. Does the regulation specifically mention FHIR?

Among those respondents who said there is regulation in place, the majority of respondents (59 of 74, or 80%) said FHIR is either mandated or is being advised. This percentage has been steadily increasing since the benchmark survey (74% in 2025; 65% in 2024 and 56% in 2023). **Regulation mentioning FHIR is increasing.**

FUNDS TO STIMULATE ADOPTION

Q. Are there government funds available to stimulate the adoption of FHIR?

In 2026, more than half of respondents (51% - 50 of 98) said there are no government funds available in their respective countries to stimulate the adoption of FHIR, a slightly higher proportion than in 2025 (48%); 2024 (39%) and 2023 (47%). **This suggests the prevalence of government funds available for FHIR adoption may be decreasing, or the respondents are not aware of the funds.**

STANDARDS DETAIL/OTHER COMMENT

Q. Can you share more information about these regulations and funds, including names and links?

Q. Is there anything else you'd like to mention regarding health data regulation in your country?

Respondents were given the opportunity to provide additional information and open-ended comments about health data standards regulation in their countries. Respondents from 57 countries provided the following comments:

Argentina

In Argentina, Law 27,706 on Electronic Health Records and its regulation establish the mandatory interoperability of health information systems, delegating the technical implementation to the Ministry of Health. Within this framework, through resolutions, national digital health strategies, and implementation guides, the Ministry has adopted HL7 FHIR as the standard for clinical data exchange. Therefore, while it is not mandated directly by law, it effectively becomes the de facto standard for integrating with the National Digital Health Network.

No.

Australia

As of 2025, a legislative foundation for mandating healthcare data and interoperability standards has become law. The federal government has strongly indicated that they will be looking to mandate FHIR.

Bangladesh

Right now we do not have any regulations
We need Health Data Governance Policy Framework

Belgium

Data Capabilities projects
eHealth
BMUC

Brazil

https://rnds-fhir.saude.gov.br/
There is a MoH secretary SEIDiGI which rules the interoperability architecture and ecosystem and there is a national policy for digital health and a published digital health strategy

Canada

No.
Its fragmented.

We don't have these yet in Canada but they are likely forthcoming with the introduction of Bill S-5, the Connected Care for Canadians Act.
It is anticipated that the regulations stemming from Bill S-5 will include something about the use of FHIR.

There is pending federal legislation to encourage data sharing, although the legislation doesn't mention the standards. There are also national efforts for a common data model.

Chile

We have 2 laws: Ley 21.668 de Registros Clínicos Electrónicos Interoperables, Ley 21545 de Sistemas de Telemedicina, both laws with Technical norms an regulations for implementation.
Also there are 3 FHIR Implementation Guides as normative by the Ministry of Health
I think we are on the right way, but we need to work governance and the way of helping increase the human capital in this area

Colombia

Since 2020, there has been a law on Interoperable Electronic Health Records, whose minimum data set was established in 2021 through regulatory resolution 866 for the Digital Health Care Summary (RDA, for its acronym in Spanish), and in 2025, HL7 FHIR was adopted as the interoperability standard for RDA.

The latest versions of the FHIR RDA Implementation Guide (CO) were published in October 2025, and the editing and profiling process was supported by HL7 Colombia, as was the design and implementation of the national interoperability platform of the Ministry of Health and Social Protection.

Currently, the FHIR RDA (CO) IG has 37 FHIR profiles, 21 extensions, and 75 local terminologies (CodeSystems).

The FHIR RDA IG is available at: https://vulcano.ihcecol.gov.co

In the adoption process, more than 9,000 healthcare providers (hospitals and clinics) are working to adopt the specifications, together with their hospital information system (HIS) vendors (more than 50 vendors).

Hundreds of institutions are already sending FHIR RDA documents, and most are expected to go live before next April 15.
There are previous successful cases of HL7 FHIR adoption in Colombia, mainly in the private sector.

SURA: An insurer covering more than 10 million patients has been using HL7 FHIR since 2016 to exchange information with a network of more than 1,600 medical offices and hospitals.

Ecopetrol: (Colombian Petroleum Company), to strengthen its employee health plan, has been using HL7 FHIR since 2024 to exchange information with a network of more than 400 healthcare providers (the goal is to reach 1,400 points of care).

Keralty (Sanitas): An insurer with coverage for more than 8 million patients, it has been using HL7 FHIR since 2023 to exchange information with its internal network (more than 140 points of care).

All these projects have been supported by the HL7 affiliate in Colombia.

Costa Rica

https://www.ministeriodesalud.go.cr/index.php/guias-interoperabilidad#:~:text=A%20continuaci%C3%B3n%20se%20muestras%20las%20gu%C3%ADas%20FHIR,clic%20sobre%20la%20gu%C3%ADa%20que%20desea%20utilizar.

El uso de estándares en salud es un hito para el país, que asegura posicionarse a nivel global como un país que garantiza salud en términos de tecnología, sin embargo se deben explorar políticas regulatorias de gobierno de datos específicos para asegurar la continuidad y mejoramiento del uso del dato.

https://www.ministeriodesalud.go.cr/index.php/guias-interoperabilidad
There is a pending decision from the Ministry of Health on whether or not interoperability is obligatory

They don't exist yet.
The first two interoperable use cases were published along with their implementation guides in an unstable draft state.

Côte d'Ivoire

N/A.
We are working on it.

Croatia

https://narodne-novine.nn.hr/clanci/sluzbeni/2019_02_14_269.html
Nice technical docs are available on: https://simplifier.net/guide/cezih-osnova/po%C4%8Detna?version=1.0

CEZIH – Central Health Information System (Centralni zdravstveni informacijski sustav Hrvatske)
CEZIH is the central national eHealth platform, operated under the Ministry of Health and HZZO, and mandates the use of health IT standards for data exchange among Croatian healthcare institutions.

According to Simplifier's national FHIR overview:

CEZIH mandates use of IT standards including HL7 FHIR for data exchange.
Regulations advise but do not legally mandate FHIR use in all situations.
Implementation of central services are funded from state budget and various EU funds.
Implementations on provider side are funded by providers however often supported by government

Cyprus

The National eHealth Law and the regulations that the National eHealth Authority will issue
The EHDS Regulation and Implementation Acts
The Xt-EHR Joint Action Recommendations
The National eHealth Authority has been appointed by the Council of Ministers as the Digital Health Authority as dictated by the EHDS Regulation Article 19.

Czech Republic

Funding programs for health providers to implement FHIR based standard created by national interoperability project driven by moh.
FHIR based standards will follow ehds regulation.

Denmark

FHIR is gaining more traction in the minds of decision-makers, which is positive, but there is no legislation yet regarding the use of FHIR, as far as I know.

Dominican Republic

Not publicly available
Needs a lot of work. No serious multisector initiatives have taken place yet.

https://www.worldbank.org/en/news/press-release/2023/12/05/apoyo-banco-mundial-para-mejor-sistema-de-salud-publica-republica-dominicana

https://www.iadb.org/en/project/DR-L1167
Based on the previous shared proyects we have build a roadmap for the implementation of the Digital Health National Strategy

https://ensd.msp.gob.do

Ecuador

1. Regulatory Framework (Regulations)
Organic Law on Personal Data Protection (LOPDP): Published in May 2021, this law serves as the legal foundation for the ethical treatment of health data in Ecuador.

Link: https://www.telecomunicaciones.gob.ec/wp-content/uploads/2021/06/Ley-Organica-de-Datos-Personales.pdf

Organic Health Data Governance Law Project (2026): A recent legislative initiative (as of April 2026) aimed at establishing the National Interoperability Platform and the Unique Patient Identifier.

Link: https://www.asambleanacional.gob.ec/es/node/115886

Digital Health Agenda 2024-2027: A strategic document from the Ministry of Public Health (MSP) that defines the roadmap for digital transformation and the adoption of HL7 FHIR standards.

Link: https://www.salud.gob.ec/wp-content/uploads/2023/06/Manual_Agenda_Digital_2023_Seg.pdf

2. Funding and Financing (Funds)
Inter-American Development Bank (IDB): The primary financial partner providing technical assistance and loans for the Health Services Quality Improvement Program, which funds the deployment of the national interoperability model.

Link: https://www.iadb.org/en/project-search?query=Health+Services+Quality+Improvement+Program&f_project_number=&f_operation_number=&f_sector=&f_country_name=Ecuador&f_project_status=&f_from=&f_to=&f_approval_date=

MSP Flagship Investment Project (CUP 123200000): A national fund dedicated to the modernization of health services, including specific components for digital health and technological infrastructure.

Link: Ministry of Economy and Finance - Public Investment

Pan-American Highway for Digital Health (PH4H): A regional cooperation framework supported by PAHO/WHO that provides technical resources to align national systems with international standards.
1. New Regulation for Large-Scale Data Treatment (Feb 2026)
The Superintendencia de Protección de Datos Personales (SPDP) issued Resolution No. SPDP-SPD-2026-0005-R in February. This is a game-changer for the health sector:

Automatic Qualification: Health data processing is now officially classified as Large-Scale Treatment (Tratamiento a Gran Escala) regardless of the number of records.

Mandatory DPO: This status makes it mandatory for health institutions (public and private) to appoint a Data Protection Officer (Delegado de Protección de Datos - DPD).

RAT Inclusion: All health data processing activities must be explicitly detailed in the Registry of Treatment Activities (RAT) with specific technical criteria.

2. The Health Data Governance Law Project (April 2026)
The bill currently in the National Assembly (promoted as part of the 2024-2034 Digital Transformation Policy) introduces two legal-technical concepts that align with your work on FHIR:

National Interoperability Platform: It legalizes the use of X-Road as the base layer for health data exchange in Ecuador.

Unique Patient Identifier (UPI): It establishes the legal framework to unify patient identification across the MSP, IESS, and private providers, which is the holy grail for your interoperability projects.

3. Privacy by Design as a Legal Standard
The latest technical guidelines from the April 2026 workshop (led by the Vice Presidency and the BID) emphasize that any new digital health development in Ecuador must now document Privacy by Design and by Default.

This means that when implementing FHIR resources, you must justify the proportionality and necessity of every data element being exchanged, moving away from send all to a minimum necessary approach to comply with the LOPDP.

Estonia

Health Services Organisation Act - https://www.riigiteataja.ee/en/eli/ee/508012018001/consolide/current

Health Information System Statute (in estonian)- https://www.riigiteataja.ee/akt/110122025003?leiaKehtiv

Health information system data sets and conditions for their submission (in estonian) - https://www.riigiteataja.ee/akt/104122025004?leiaKehtiv

Ethiopia

It is not direct government but a fund from Global fund on SMART guideline adaption
We developed a national Digital Health Interoperability Framework and it is about to be endorsed

Finland

Regulatory orders refer to specifications which include FHIR among others. Some funding for national infrastructure which uses FHIR is available.
There are many national specifications and other standards than FHIR also referenced in regulations.

Pilot projects with funding possibilities
EHDS will impact national regulations and specifications. There are also joint projects and initiatives between Nordic regulators aiming for regional harmonisation.

France

https://esante.gouv.fr/offres-services/ci-sis/espace-publication

Décret n° 2016-46 du 26 janvier 2016 : https://www.legifrance.gouv.fr/jorf/id/JORFTEXT000031922237/
Arrêté du 26 avril 2022 : https://www.legifrance.gouv.fr/jorf/id/JORFTEXT000045726627
managed by ANS https://esante.gouv.fr/ assisted by french interoperability association InteropSante https://www.interopsante.org/

Currently there are funds allocated for a large state project called SEGUR, the standards in place are HL7 v2.5 with a French extension. We are working on the implementation of a FHIR extension based on R4, but it is not yet complete and validated by the government.
https://www.hl7.fr/ig/fhir/core/
Practices are beginning to evolve, I will work this year or next year on a FHIR integration in the field of inter-laboratory exchanges

Currently, no regulation mandates the use of FHIR in France. The European Health Data Space project will change this by providing a framework and regulations that should include the FHIR standard in the future.
The provision of data to the Personal Health Record (My Health Space) and the use of Secure Health Messaging (MSSanté) are increasingly being incorporated into public service obligations and funding criteria. For document sharing, the standards to be used are CDA R2 (levels 1 and 3). CDA is encapsulated in HL7v2.

Programs like SEGUR could encourage transition but this is not the case at this step

Nope

Most of the spec are at https://esante.gouv.fr/offres-services/ci-sis/espace-publication regulation is using those specifications.

EHDS is not yet largely taken into account in data regulation. Changes are expected in the coming years

Segur du numérique en santé / https://esante.gouv.fr/segur

Germany

Sozialgesetzbuch V, Gesetz zur Beschleunigung der Digitalisierung des Gesundheitswesens

KHZG

Iceland

There are none.

Lack of driving regulations for adoption of standards.

Ireland

EHDS Regulations for 2029 implementation and IE Health Information Bill

Department of Health is very supportive of developing FHIR governance and standards

Israel

Israel's Health Data Portability Law was enacted in July 2024 and is currently in the process of being implemented.

The law, and detailed regulations published in accordance with it, set forth requirements for implementing a FHIR infrastructure for mandatory data portability throughout Israel's health system and other government bodies (Welfare, etc).

This process is funded by the Ministry of Health and its implementation is guided by the Ministry in cooperation with Israel's active FHIR community.

Full implementation of the Law requirements is expected by July 2029.
The Law - https://fs.knesset.gov.il/25/law/25_lsr_4715833.pdf

The Regulations -
https://www.gov.il/he/pages/cfb-data-portability-certification-program
FHIR IL Community website - http://fhir-il-community.org/en
The confidentiality and safety of health data are mainly regulated by the Patient's Rights Law. In addition, the Privacy Protection Law and its regulations administer complementary requirements which the Patient's Rights Law does not address

Italy

PNRR Funds (https://www.agenas.gov.it/pnrr/missione-6-salute), HL7 Italy (https://www.hl7.it/fhir/), Decreto EDS (https://www.gazzettaufficiale.it/atto/serie_generale/caricaDettaglioAtto/originario?atto.dataPubblicazioneGazzetta=2025-03-05&atto.codiceRedazionale=25A01321)
Every Region (e.g. Regione Lombardia) in Italy is working on the promotion and adoption of FHIR standard introducing it in new projects.

linee guida FSE2.0 maggio 2022 (Ministry of Health) (https://www.gazzettaufficiale.it/eli/id/2022/07/11/22A03961/sg); funded through the National Recovery and Resilience Plan
The Italian Health system is regional based so different policies are applied (with strong differences aslo in term of maturity among regions)

As far as I know there is no proper legal regulation to mandate the adoption of FHIR but
-FHIR is a mandatory requirement in all new public tenders since at least the last 3 years
-FHIR Is the standard adopted within the National Health Data Space project related to the national federated document registry/repository (FSE)

Kenya

https://mhealthkenya.org/publications/policy/KENYA_NATIONAL_eHEALTHPOLICY_2016-2030.pdf

No

Lao People's Democratic Republic

We have ADB and Governance to support for develop data exchange
We need data privacy and security law or regulations because the currently is not yet

Marshall Islands

The Data Modernization Initiative (DMI), supported by funding from the Public Health Infrastructure Grant (PHIG), manages and coordinates the interconnectivity of the organization's Health Information System (HIS) infrastructure. This initiative works to enhance network reliability, support system integration, and ensure secure and efficient access to health data for public health operations.

Not for now

Nauru

Need yo ask ICT government ministry

SOP implementation needed

Nepal

Nepal's digital health ecosystem is governed by a combination of national regulations, public insurance programs, and emerging interoperability standards.

1. National Health Data Standards (FHIR / HMIS)

The Government of Nepal, through the Ministry of Health and Population Nepal, has introduced a national interoperability framework based on HL7 FHIR.

Name: Nepal HMIS FHIR Implementation Guide
Link: https://fhir.hmis.gov.np
Details:
Current version: 0.0.1-ballot (draft)
Based on FHIR R5
Defines standardized resources such as Patient, Observation, and Medication for data exchange across systems

This serves as the future national standard for health data interoperability.

2. Health Insurance Board (HIB)

The Health Insurance Board Nepal manages Nepal's national health insurance program.

Legal basis: Health Insurance Act (2017)
Program start: 2016 (national rollout ongoing)
System used: openIMIS
Reference: https://openimis.org/nepal-health-insurance

Key functions:

Beneficiary enrollment
Claims processing and reimbursement
Provider management

The system is implemented nationwide and covers millions of beneficiaries across most districts

Interoperability:

Hospitals submit claims electronically
APIs are being aligned with FHIR R4 for integration with EMR systems

3. Social Security Fund (SSF)

The Social Security Fund Nepal is another national scheme providing social protection.

Covers:
Health benefits
Accident insurance
Pension and social protection for formal sector workers

Technology:

Uses systems aligned with openIMIS architecture
Moving toward FHIR-based interoperability, similar to HIB

4. openIMIS Platform (Core Digital System)
Name: openIMIS (Insurance Management Information System)
Link: https://openimis.org

Role in Nepal:

Core platform for HIB (and related schemes)
Handles:
Enrollment
Claims submission and adjudication
Payments and reporting

It supports integration with other systems (e.g., DHIS2, EMRs) using FHIR standards

5. Supporting National Systems
HMIS Portal: https://hmis.gov.np
System: Electronic Health Management Information System (eHMIS)
Used for:
National reporting
Health facility data collection
Policy and planning support
Nepal's health data regulation framework is still evolving, with ongoing efforts to standardize interoperability and strengthen governance. While initiatives such as the HMIS FHIR Implementation Guide and platforms like openIMIS are important steps toward digital integration, there is currently no fully enforced nationwide standard for health data exchange.

Key challenges include:

- Fragmentation across systems (FHIR, DHIS2, and custom APIs)
- Limited enforcement of interoperability standards
- Lack of comprehensive data protection and privacy regulations specific to health data
- Variability in digital maturity across healthcare providers

However, the government is actively moving toward a more unified digital health ecosystem, with increasing focus on interoperability, data standardization, and integration of insurance systems like HIB and SSF.

Overall, Nepal is in a transition phase, progressing toward a more structured and interoperable health data environment, but further policy development and implementation are needed for full standardization and compliance.

Netherlands

Lots of regional initiatives. I am of one of them, RIVO Noord Zorgviewer specifically.

https://www.rijksoverheid.nl/documenten/publicaties/2022/10/21/implementatie-fhir

EHDS

Wegiz (not yet approved)
IZA / FHIR agreement
Traditionally left to the market to regulate with Nictiz as independent party in the middle

New Zealand

https://www.healthnz.govt.nz/about-us/who-we-are/expert-groups-and-networks/expert-groups/health-information-standards-organisation
New Zealand has strong regulation over some aspects of health information sharing, particularly privacy and national identifiers. However, it does not have a single broad legal mandate requiring all electronic health data exchange across the sector to use a defined interoperability standard such as FHIR.

Instead, the New Zealand system relies on a layered mix of policy mandates, standards governance, access to national systems, and procurement levers within the publicly funded health sector. These mechanisms can be highly influential in practice, but they do not amount to a universal legislated requirement.

HISO is New Zealand's key health information standards body and sets requirements for the safe, secure, and equity-led use of health information. Together, HISO and Health New Zealand have established a FHIR-first policy. Within Health New Zealand, this requires FHIR to be used for new health data exchange solutions. For all health providers, it strongly recommends FHIR for new builds and the modernisation of existing systems, with implementers expected to use it as a principal standard for APIs and messaging services.

As a result, the use of FHIR is strongly promoted and, in many cases, effectively required for participants in the public health sector through administrative policy, procurement conditions, and the architecture of national systems. But it does not currently have the statutory basis that would make it legally enforceable across all health providers.

Health Information Standards Organisation (HISO)
There are no mandatory standards, just endorsed standards such as HL7 FHIR and SNOMED CT

Nigeria

In 2025, Nigeria launched the Nigeria Digital Health Architecture (NDHA) for an Interoperable Digital Health Ecosystem https://www.digitalhealth.gov.ng/relevant-documents. Nigeria also has commenced the development of the Nigeria core FHIR IG following three other program specific IGs in 2025
Nigeria also has a strong standards (Health Informatics ISO TC 215) committee that has already approved and domesticated 32+10 ISO standards as national standards for health. This year,

2026, ISO 27269:2025 — Health informatics - International patient summary (IPS) is under ballot for adoption, the Similarly, medical devices standards are being discussed including AI as medical devices.

Norway

https://www.helsedirektoratet.no/digitalisering-og-e-helse/helseteknologiordningen
HL7 FHIR is only advised to use, not required. Vendors are on hold due to this. They want requirements. EHDS will solve this.

https://lovdata.no/forskrift/2015-07-01-853

FHIR is not the best solution for all integrations

Helseteknologiordningen:HL7 Norway has received some funding to support the adoption of FHIR in the municipalities/ primary care sector. Until now mainly secondary care and national services have been on FHIR.

There are limited resources to follow up on the mandated FHIR recommendations

Papua New Guinea

The National Digital Health Strategy identifies the need for standards and interoperability policies
(https://1drv.ms/b/c/f5bdfcdfcc960401/Ea5q2aFprZZKkyuh4ubsJ4wB2WBIF6mVT5p7gLNSl3E8Nw?e=2mee3T)

Digital health implementation is in its early stages and a focus is on developing interoperability standards using a FHIR based registry

There is limited government funding available to implement digital health activities. The department of health will look to incorporating development partner support and expertise to implement activities to achieve digital health strategy goals.

There is no health data regulation for the country.

Poland

Reporting of medical events to the central system (P1)
HL7 CDA (Polish National IG) is boligatory format of (some types of) clinical documents in electronic form

Portugal

SPMS technical specification- not mandatory because spms is a regulator but also a competitor in the digital health space.

Rwanda

National Regulations and Policies Supporting FHIR in Rwanda
1. Digital Health Governance Framework

Institution: Ministry of Health Rwanda

This framework ensures that all digital health systems (including EMRs, health information exchanges, and interoperability platforms) comply with national standards, security requirements, and governance processes.

It supports interoperability technologies such as HL7 and FHIR when implementing digital health solutions.

Key objectives

Standardize digital health systems
Ensure secure exchange of health data
Align technology with national health strategy

Official page
Digital Health Governance Framework
FHIR implementations such as OpenMRS integrations, health information exchanges, and APIs must follow these governance guidelines.

2. National Data Sharing Policy (2025)
Institution: Rwanda Information Society Authority and Ministry of ICT and Innovation
This policy establishes the legal framework for data exchange between government institutions, which is essential for FHIR-based interoperability.

Purpose

Enable secure data sharing across institutions
Define access protocols and privacy safeguards
Support digital public infrastructure
FHIR APIs are one of the technical mechanisms used to implement these data-sharing principles.

Source
National Data Sharing Policy approved

3. Rwanda Digital Health Strategy
Institution: Ministry of Health Rwanda
This strategy outlines Rwanda's roadmap for digital health systems including:
Interoperable EMR systems
Health Information Exchange (HIE)
Standards-based integration (HL7 / FHIR)

Data-driven decision making
Rwanda has established a strong regulatory framework for health data governance. Personal health data is protected under Law No. 058/2021 relating to the protection of personal data and privacy. The Ministry of Health and Rwanda Biomedical Centre oversee health information systems and data governance. Research involving health data requires approval from the Rwanda National Ethics Committee. Rwanda is also promoting interoperability through digital health strategies and standards such as HL7 FHIR to enable secure and standardized data exchange across national health information system

Samoa

Pacific Island Countries have varying reglations and also generic. There is no specific regulation for FHIR

In the Pacific, Data Regulation is crucial and there is a movement in the region to develop minimum requirments for data regulation. If regional data regulations are established, this will provide specific countires with oppotunity to contextualise to fit situation.

Saudi Arabia

The national eClaims system is based on FHIR R4. Clinical data exchange using FHIR is emerging.

Singapore

Limited funding and resources

Awareness of fhir is lacking in local IT industry

Slovakia

Same as last year - national law 153/2013 https://www.slov-lex.sk/ezbierky/pravne-predpisy/SK/ZZ/2013/153/20200909

ISO 13 606 is mandatory at national level - this will be changed based on the EHDS requirements (hopefully)

Slovenia

Healthcare Databases Act Articles 14.x.(https://pisrs.si/pregledPredpisa?id=ZAKO1419) , to be replaced by Healtcare digitalization Act (https://pisrs.si/pregledPredpisa?id=ZAKO8996). Healthcare providers are obliged to use national EHR and their local systems need to align with the respective APIS/technical specifications. The authority responsible for eHealth decides on standards and publishes specifications
The regulation adresses standards indirectly by means od appointing digital health authority, and the later decides on standards

There is no structured data, all is majorly in Slovene for Governmental documents as eHealth strategy and guidelines see National Interoperability Framework: https://nio.gov.si/en/ and Guidelines (in Slovene):
https://nio.gov.si/api/files/6d28b40f-532c-493b-88a0-67cbe16a9f70/file?download=true.

South Sudan

There are discursions to put in place some regulations and funds but non is currently achieved

Spain

All new projects have to support FHIR.
No.

Sri Lanka

National Digital Health Blueprint for Sri Lanka
https://www.health.gov.lk/wp-content/uploads/2023/11/Digital-Health-Blue-Print-Full-Book-01.11.2023-Final.pdf

National Digital Health Guidelines & Standards
https://www.health.gov.lk/wp-content/uploads/2023/11/NDHGS-v2.pdf

No.

Sweden

Will be positively impacted by EHDS

Driven by both EHDS and national needs, the Swedish E-Health Agency is developing national services that will be mandatory. https://simplifier.net/organization/swedish-ehealth-agency/~guides

The trend is good - all national (state) services will be on FHIR, rolling out starting now and during the coming few years.

Switzerland

fhir.ch; https://www.fedlex.admin.ch/filestore/fedlex.data.admin.ch/eli/oce/2025/58/de/pdf-a/fedlex-data-admin-ch-eli-oce-2025-58-de-pdf-a.pdf (german)
As part of the national DigiSanté program, a Swiss Health Data Space is being established, and FHIR will continue to be driven forward there: https://www.digisante.admin.ch/de; https://www.digisante.admin.ch/de/start-entwicklung-basisdienstes

Swiss EPR regulations which includes the FHIR exchange formats and API in the Annexes see https://www.e-health-suisse.ch/en/technique/technical-interoperability/specifications-for-the-epr-implementation
Its required but not yet implemented, we have a new initiative with SwissHDS where they will require FHIR too, but the regulation is not yet written

Taiwan

Sprout Project https://htsprout.nhri.org.tw/, Cross-hospital FHIR Data Platform https://www.mohw.gov.tw/cp-18-84768-1.html, FHIR to Be Included in Hospital Accreditation: https://www.cio.com.tw/104007/,Three AI major centers https://aicenter.mohw.gov.tw/AC/mp-208.html, etc.

https://www.mohw.gov.tw/mp-2.html

No.

Tanzania, United Republic of

No regulations as yet. What is in place are documents such as the Tanzania Digital Transformation Strategy 2025/20230 and the Tanzania Health Enterprise Architecture Blueprint; where FHIR is clearly mentioned as one the key standards to be adopted in the health sector in general.

There still some gaps on data governance framework in general, though currently there is Personal Data Protection Act in place.

Togo

To my knowledge, Togo does not yet have a specific FHIR regulation with a defined complance deadiline.

The implementing regulation on interoperability have not yet been published, the law provides for consent, individual rights, and breach notification (national register),and implementation governance and technical solutions is still underway.

Tonga

We currently do not have regulation or fund

We do have Personal Health Information Protect Act but FHIR is not included in this document.

Turkey

Turkish Ministry of Health opens up APIs and enforces all public and private hospitals across the country to send data regularly to the central servers of the ministry. These APIs are proprietary, not adhering to any standards.
https://ussservis.saglik.gov.tr/

FHIR is being utilized in the integration of the services running on the servers of the Ministry of Health, after the data is collected from the hospitals across the country. For example, the national chronic disease management system (https://hyp.saglik.gov.tr/) manages all its data adhereing to FHIR R4 and integrates with other centrally served applications.

Uganda

No.

Data safety.

United Kingdom

In England the Data (Use and Access) Act 2025, passed in June 2025, extends existing powers under Section 250 of the Health and Social Care Act 2012 to mandate information technology standards — critically, for the first time bringing IT suppliers directly within scope alongside care providers. While the Act is enabling legislation (specific technical standards are yet to be defined), it establishes enforcement powers including public censure for non-compliant vendors, and aligns with NHS policy direction strongly indicating FHIR R4 (UK Core) as a basis for health data interoperability.

https://www.legislation.gov.uk/ukpga/2025/18/schedule/15
https://digital.nhs.uk/data-and-information/information-standards

Scotland has a direct equivalent: the Care Reform (Scotland) Act 2025, passed in July 2025, provides powers to mandate information standards for health and social care, with provision for civil sanctions to be imposed on persons who breach the duty to comply. Secondary legislation will set out the details of the information sharing scheme and civil enforcement scheme in relation to those information standards.

https://www.legislation.gov.uk/asp/2025/9/contents

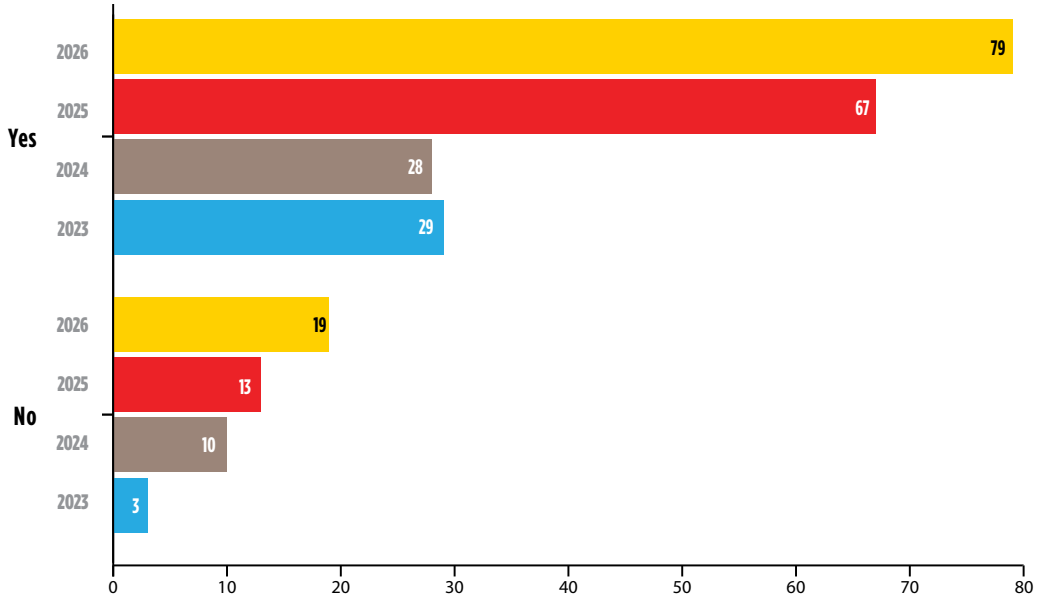

Healthcare provision in the UK is a devolved matter, with England, Scotland, Wales and Northern Ireland each having separate legislative competence and policy responsibility for their health and social care systems. This means that NHS England, NHS Scotland, NHS Wales and Health and Social Care Northern Ireland (HSCNI) operate under distinct legal frameworks, with interoperability standards, data legislation and IT requirements set independently by each nation.

United States

https://isp.healthit.gov/appendix-v-federal-fhir-action-plan-ffap

CMS + ASTP provide several regulations to promote the adoption of FHIR (see last FIRELY mail blast)
The US uses layers to compliance enforcement (e.g. Program participation to receive payments)

NATIONAL STANDARDS

Q. Is there a national organization in your country responsible for health data standards?

NOTE: This question was asked as follows in 2023 and 2024: Is there a national standards organization in [your country] for use of standards in electronic health data exchange?

The vast majority of the respondents (79 of 98) stated there is a national organization in their country for health data standards. This is a slightly lower proportion than in 2025.

Respondents were asked to provide the link of the organization(s).

Yes/Link of organization

FHIR IMPLEMENTATION GUIDE

Q. Is there a base/core FHIR implementation guide for your country?

Of 101 respondents, the majority (78) said their country has a base/core FHIR implementation guide that is widely used (21), limited to specific use cases (28) or under development (29), while 20 said there is no guide, and 3 said they don't know. This question was changed in 2025, so comparisons were not made to previous years.

Respondents were asked to provide the name of the model.

Yes, it is widely used

TYPE OF FHIR USE CASES

Q. For which of the following use cases are FHIR specifications (being) developed in your country? Choose as many as you like.

Use-case development is led by prescriptions/pharmacy (42), terminology (37), diagnostic orders/reports (34), immunizations (30) and document exchange (27).

Other single mentions were as follows:

1. Patient Summary
2. Patient Summary
3. Laboratory test
4. Telemedicine
5. Health Workforce
6. MPI; Health Declaration; Cancer data; Advance Healthcare Directive (AHD); eAmbulance
7. Locations
8. Disclosure notifications of social services data, Delivery of health certificates to external authorities, Functional capacity
9. Diagnoses, procedures, encouters, AuditEvent, Communication, CommunicationRequest, functional status
10. Business intelligence, ressources management
11. See https://interop.esante.gouv.fr/ig/fhir
12. Directory of healthcare professionals, National Directory of Health Services and Resources
13. DIGA
14. Health App
15. Lab results, pathology
16. Laboratory order management , home care management, patient summary
17. Laboratory; Telehealth
18. Personal Health Record
19. Endpoint Registry
20. Longitudinal health record
21. Patient Summary
22. Connectathon
23. Contact details, care teams, episodes of care
24. Encounter Summary for the National Electronic Health Record
25. IPS, electronic pregnancy passport, Transition of Care, Emergency Record

INTERNATIONAL SPECIFICATIONS

Q. Which international specifications serve as the basis for your national FHIR specifications? Please select all that apply. Leave empty if none.

The most common response when asked which international specifications serve as the basis for their national FHIR specifications was International Patient Summary (49 respondents) followed by European Implementation Guides (44 respondents) and IHE Profiles (40 respondents), a new option added in 2026.

Other single mentions were as follows:

1. SMART App Launch, Structured Data Capture, Bulk Data Access
2. CACDI
3. PH4H
4. N/A
5. None for now. HL7 Eu in the future
6. HL7 FHIR & US CORE IG

13. US Core is complies with IPA; the new US PCS aligns with IPS

FHIR TERMINOLOGY

Q. Is there a national FHIR terminology server available in your country?

Roughly half of respondents (55 of 100) said Yes, there is a national FHIR terminology server in production or development in their county. Another 23 respondents said No, but it's in planning.

Yes, in production

- Australia
- Austria (2)
- Brazil
- Canada (3)

STATUS OF FHIR COMMUNITY PROCESS

Q. From a country perspective, which statement best describes the status of the FHIR Community Process (FCP) in your country?

Approximately one-third of the respondents (34 of 98) said there is no known FHIR Community Process (FCP) related activity in their country. Slightly fewer respondents (29) said one or more organizations are exploring becoming FCP participants. FCP activity is still early.

Approved FCP

- Australia
- Austria*
- France*
- Germany*
- Israel
- Saudi Arabia
- Slovenia*
- Switzerland*

Approved FCP participants in our country

- Dominican Republic*
- France* (2)
- United States (2)

Specifications in development

- Colombia
- Costa Rica*
- Italy* (2)
- Rwanda

FUTURE FHIR COMMUNITY PROCESS

Q. Where do you expect your country to be in 2–3 years regarding the FHIR Community Process (FCP)?

Looking ahead two to three years, expectations shift toward activity: 27 of 96 respondents expect organizations exploring FCP participation, 19 expect approved participants, 16 expect approved specifications and 3 expect specifications in development; 11 expect no known activity and 20 don't know.

Approved FCP
- Australia
- Austria*
- Canada*
- Colombia
- Costa Rica*
- Cyprus
- France* (3)
- Germany*
- Israel
- Italy*
- Nigeria
- Saudi Arabia
- Switzerland*

NATIONAL STANDARDS COMMENTS

Q. Is there anything else you'd like to share on national standards development in your country?

Respondents were given the opportunity to provide additional information and open-ended comments about national standards development in their countries.

Argentina

No

Australia

HL7 Australia has an Australian FHIR Management Framework which defined an FCP-compliant Australian FHIR Community Process (AFCP) and the Australian FHIR Coordination Committee (AFCC) which oversees the AFCP's operation.

HL7 Australia has also established a Technical Steering Committee which provides governance for standards development activities across the four HL7 Australia Work Groups all underpinned by the HL7 Australia Governance and Operations Manual.

The Sparked FHIR Accelerator is moving into its fourth year with over 1400 participants and over 28000 in-kind hours of participation provided by the community. The Sparked Accelerator has now published the following FHIR Implementation Guides:
–2 versions of AU Core
–1 version of eRequesting
–1 version of the Australian Patient Summary
and 2 versions of the Australian Clinical Data for Interoperability (AUCDI) technical specification.

Austria

Hl7 Austria as leading Standards developing organization, joint Meetings with dicom ihe and snomed nrc, Memorandum of understanding in place between Main SDO

Bangladesh

We would like to adopt HL7 FHIR use case one by one

Brazil

A lot, but no time to report

Canada (2)

N/A

Multiple provincial health ministries are adopting FHIR standard and profiles for use within their jurisdictions or for their provincial implementations.

Chile

I think we will work in the next years hard in this direction. There is conviction in the country regarding the importance of this

Colombia

The existence of an official HL7 affiliate in the country has made it possible to accelerate the adoption of HL7 FHIR, design and adopt the first use cases, and begin to build a standards governance model in which the HL7 user community participates.

Costa Rica (2)

Se requiere mayor capacitación a los sectores, siendo un tema novedoso, en muchas ocasiones no se entiende ni la necesidad real de implementación ni el uso que corresponde a un estándar.

Currently, the DHIT Costa Rica organization is leading this issue in the country, offering help and coordination to the public and private sectors.

Côte d'Ivoire

No

Dominican Republic

There'a a lack of interest to make it a collaborative work.

Ecuador

1. The National Interoperability Model Workshop (April 2026)
Just this month, a high-level technical summit was held in Quito to finalize the National Health Interoperability Model. This isn't just a document; it's the technical "blueprinting" for the Single Electronic Health Record.

The Goal: To move from isolated "silos" of information in the MSP and IESS to a real-time data exchange.

The Tech: It officially adopts the Ruta Panamericana de Salud Digital (PH4H) framework, meaning Ecuador's standards are being designed to be compatible with other countries in the region (like Brazil or Chile) for cross-border health events.

2. The "Governance of Health Data" Bill
There is a specific legislative push this month for the Organic Law on Health Data Governance. This is significant because it provides the legal "teeth" for:

Mandatory Standards: Making HL7 FHIR R4 and SNOMED CT legally required for any software vendor operating in the country.

The National Health Data Platform: Establishing a central ""hub"" where patients can finally access their own clinical history through a secure national portal.

3. Shift Toward ""Semantic Interoperability""
Ecuador is moving beyond just ""sending files"" to ""understanding data.""

SNOMED CT Expansion: The country is actively expanding its national release of SNOMED CT to include specific local terminologies (like traditional medicine or specific regional epidemiology).

LOINC for Labs: There is a nationwide push to standardize laboratory results using LOINC, ensuring that a blood test result in Loja is interpreted exactly the same way in a hospital in Quito."

Ethiopia

We developed the framework now and we are planning to develop/adapt the national digital health standards

Finland

There is a commitment to implement new interfaces for national infrastructure using FHIR where feasible. EHDS requirements are one driver as well.

France

No.

Guatemala

There is a huge disorder and lack of governance, some of this supportend by international development agencies and multi-laterals. It is necessary to strengthen the national ecosystem engaging with private sector and academia.

Iceland

hope this will be at some point but lack of funding

Ireland

Ireland is in the process of establishing a FHIR Affiliate to provide governance, education and dissemination on FHIR

Kenya

We are currently conducting numerous workshops for capacity building, and we have also begun exploring a certification and conformance process for implementers before they start using the HIE.

Korea, Republic of

No

Lao People's Democratic Republic

We have some standards such as health facilities, villages, district and province list

Marshall Islands

No.

Nauru

There should be a strong effective coordination

Nepal

Nepal is developing national health data standards under MoHP, with SIL-Nepal providing technical support. Draft FHIR R5 specifications exist, while operational systems like HIB and SSF use FHIR R4. The goal is a unified, interoperable digital health ecosystem.

Netherlands (2)

We all want to harmonize, but we are not taking the time to do it.

Like any European country we have local needs, and people that think EHDS serves everything one could want. This is a serious misconception that will lead to adoption issues if not managed. We have a distributed data-at-the-source setup with index services to find things. Use cases like a single consolidated patient summary or medication overview require different approaches than in countries with a central repository.

New Zealand (2)

HL7 New Zealand has a FHIR Implementation Work Group that collaborates with representatives from Health New Zealand and vendors to develop the NZ Base standard and provide advice on FHIR implementation.

Development of a national FHIR based HIE Platform (Hira) was curtailed in 2024 due to the withdrawal of funding.

Nigeria

National health standards is fragmented from Standards Organization of Nigeria (having regulatory mandate for standardisation and views this from ISO and IEC lens). The Nigeria Digital in Health Initiative (NDHI) and Federal Ministry of Health are leading the development of the Nigeria Core FHIR IG. With the aim to harmonise them all.

Papua New Guinea

The country is in the initial stages of beginning the process for national standards development

Rwanda

In Rwanda, national standards development is coordinated mainly by the Rwanda Standards Board in collaboration with sector institutions such as the Ministry of Health, Rwanda Biomedical Centre, and Rwanda Information Society Authority. The country generally adopts and adapts international standards rather than developing entirely new ones. In digital health, Rwanda promotes interoperability through frameworks aligned with global standards such as HL7, FHIR, and ISO information security standards. Professional communities such as the Rwanda Health Informatics Alliance also support capacity building and awareness of these standards.

Samoa

The Pacific (April) will commence development of regional standards which will address many areas being asked in this survey.

Saudi Arabia

Balloting managed by the affiliate process which mirrors HL7 International processes not the FCP process.

Slovenia

Through HL7 Slovenia we are trying to facilitate adoption of HL7 FHIR and development of national HL7 IG (in collaboration with HL7 Europe)

Spain

N/A

Taiwan

No.

Tanzania, United Republic of

Looking at the progress and the significant efforts already made in digitalization and interoperability within the Tanzanian health sector, as well as the existence of strategic documents that clearly emphasize the adoption of standards, particularly FHIR, it is evident that there is strong political commitment and a clear desire to implement these standards. However, the key constraints remain limited capacity, both in terms of technical expertise and financial resources, which are necessary to fully realize and operationalize these interoperability initiatives.

Togo

Togo is still developing its digital health frameworks via the CNSD, but there are no published national FHIR guides and no official terminology server, the focus is on data protection (2019 law) and cybersecurity for now

Tonga

Here in Tonga still trying to integrate our NHIS and the CRVS System from the Ministry of Justice.

United Kingdom

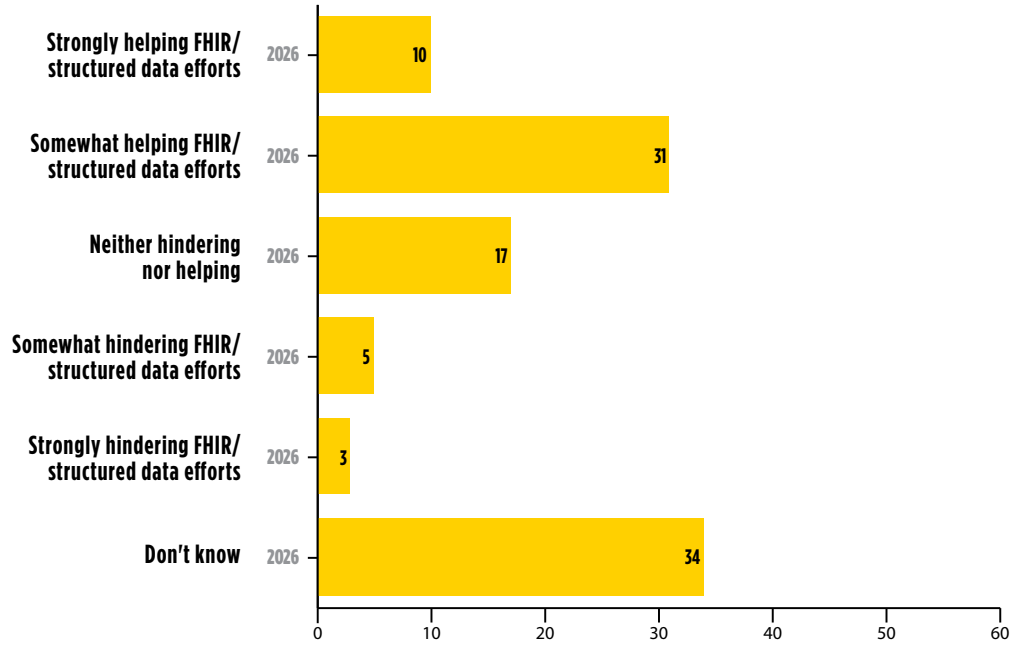

HL7 UK FHIR Board Meeting Papers are published here https://confluence.hl7.org/spaces/HL7UK/pages/79510733/Meeting+Papers+-+HL7+UK+FHIR+Board

HL7 UK FHIR Community IG Initiative Registry https://confluence.hl7.org/spaces/HL7UK/pages/81019995/HL7+UK+FHIR+Community+IG+Initiative+Registry

United States

Most of our work is direct with HL7 International. Some projects use FHIR community Process

IMPACT OF AI/ML

Q. How is the increasing use of AI/ML affecting FHIR and structured data efforts in your country?

AI/ML is viewed more as helping than hindering: 41 of 100 respondents said it is strongly (10) or somewhat (31) helping FHIR/structured data efforts, compared with 8 who say it is hindering; 17 say neither and 34 don't know.

Strongly helping
- Chile
- Costa Rica*
- Ecuador
- Iceland
- Kenya
- Nauru
- Nepal*
- Singapore
- Switzerland*
- Taiwan*

Somewhat helping
- Argentina

AI/ML MOST AFFECTING FHIR

Q. In which ways is AI/ML most affecting FHIR implementation and data standardization in your country?

Less than half of respondents (39 of 95) said AI/ML has had no noticeable impact yet on FHIR implementation and data standardization, followed by increasing interest in FHIR/structured data as a foundation for AI (28), accelerating FHIR mapping/transformation (14), reducing the perceived need to invest (8) and other (6).

Accelerating

- Bangladesh
- Bosnia and Herzegovina
- Costa Rica*
- Croatia*
- France* (3)
- Iceland
- Kenya
- Rwanda
- South Sudan
- Sweden*
- Switzerland*
- Taiwan*

Increasing Interest

AI/ML MOST AFFECTING FHIR (con't)

Q. In which ways is AI/ML most affecting FHIR implementation and data standardization in your country?

Respondents were given the opportunity to provide additional information and open-ended comments about AI/ML most affecting FHIR implementation and data standards in their countries.

Colombia

Facilitating data capture at source

Finland

AI discussions are both reducing and increasing interest in structured data and FHIR, depending on who you ask.

Luxembourg

Don't know

Papua New Guinea

Don't know

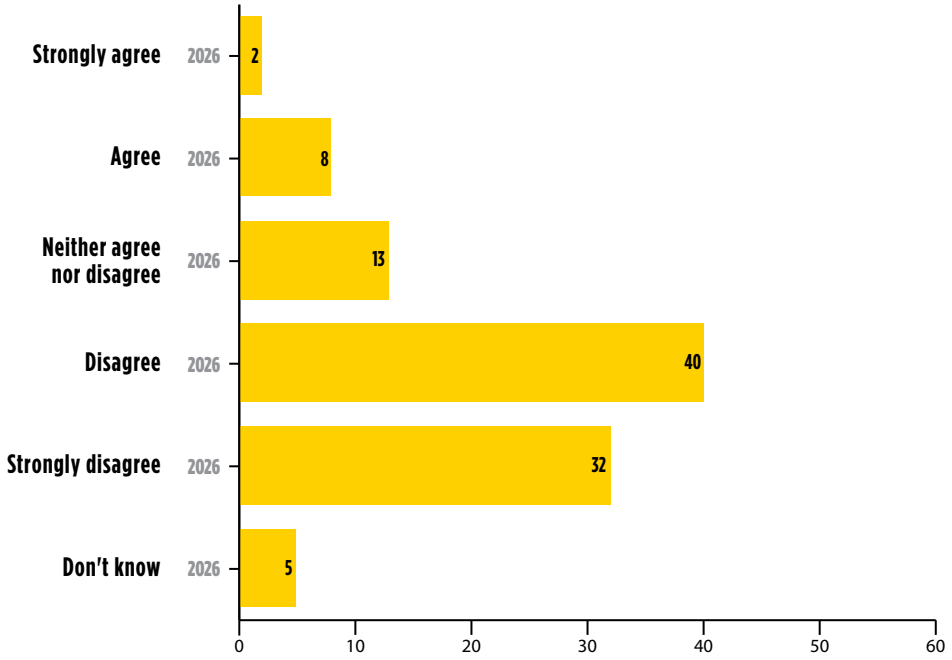

Portugal

Cant really assess at this point

Sri Lanka

Not known

AI AND FHIR/STRUCTURED DATA INVESTMENT

Q. Given advances in AI, it is less important to invest heavily in FHIR/structured data, because AI can interpret unstructured data directly.

Respondents strongly reject the premise that AI reduces the need to invest in FHIR/structured data: 72 of 100 respondents disagree or strongly disagree, while 10 agree/strongly agree, 13 are neutral and 5 don't know.

Strongly agree
- France*
- Taiwan*

Agree
- Bangladesh
- Belgium
- Costa Rica*

WHO IS ADOPTING FHIR

Q. Who are the main stakeholders adopting FHIR in your country?
(multiple choice; multiple answers accepted)

Government agencies (76) are most often cited as adopting FHIR, followed by EHR system vendors (68), app developers (55), care providers (44), researchers (28), diagnostic system vendors (27), payers/insurers (20) and clinical registries (16).

2025 – 1. EHR vendors (60 of 82); 2. Care providers (42 of 82)
2024 – 1. EHR vendors (30 of 38); 2. App developers (25 of 38)
2023 – 1. EHR vendors (20 of 32); 2. App developers (19 of 32)

Other single mentions were as follows:

1. Academy
2. Social Security
3. HMOs
4. Vendors at large
5. Don't know
6. Medical informatics NGOs

Not all variables were included beginning in 2023

PRIMARY DRIVERS OF FHIR ADOPTION

Q. What are the main drivers for FHIR adoption in your country?
(multiple choice; multiple answers accepted)

FHIR adoption is driven most by regulation and grants (64) and innovation (59), followed by patient data access (52), improved health outcomes (47) and improved care workflows (46).

Other single mentions were as follows:

1. Interoperability
2. International interoperability
3. Diminishing costs
4. I don't know
5. Mostly promoted by international organizations
6. Integration between EMA & NCAs
7. To enable interoperability
8. FHIR API becoming available

Not all variables were included beginning in 2023

SUCCESSFUL FHIR USE CASES

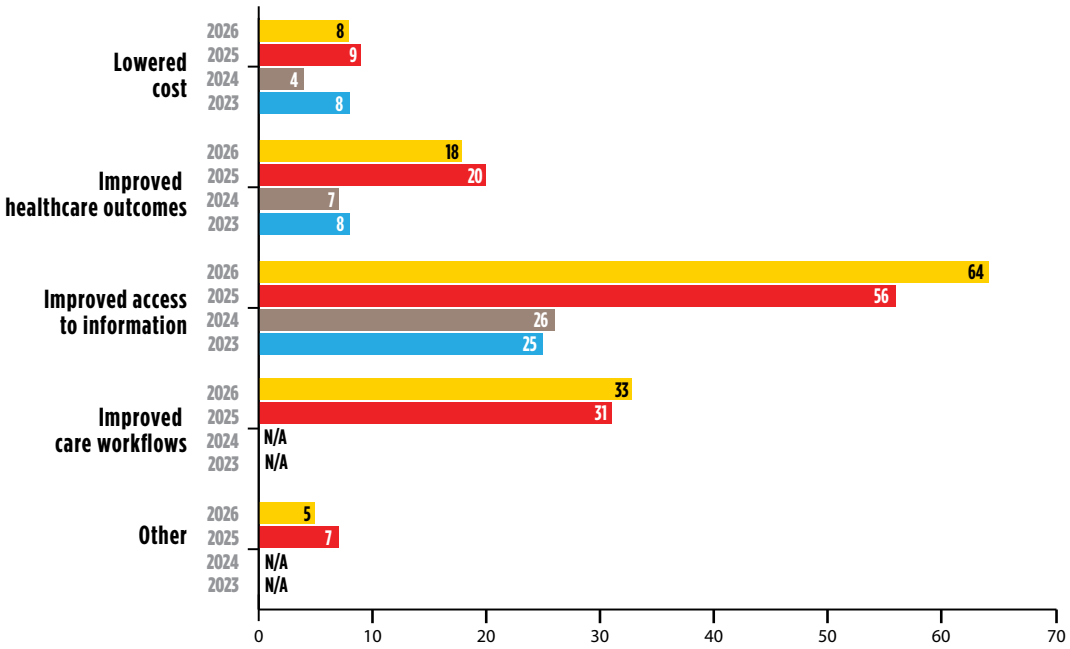

Q. Are you aware of successful FHIR use cases in your country?

The majority of respondents (77 of 101) were aware of successful FHIR use cases in their countries, while 24 were not.

This proportion is consistent with previous years.

2025: 63 of 82 respondents were aware, while 19 were not.
2024: 29 of 38 respondents were aware, while 9 were not.
2023: 26 of 32 respondents were aware, while 6 were not.

FHIR USE CASE MAIN ACHIEVEMENTS

Q. What were the main achievements of this/these FHIR use case(s)?
(multiple choice; multiple answers accepted).

Improved access to information remains the clearest achievement of the FHIR use cases, cited by 64 respondents; improved care workflows (33), improved healthcare outcomes (18), lowered cost (8) and other achievements (5) were cited less often.

Other single mentions were as follows:

1. Better use of terminology.
2. Uniform integration possibilities
3. Natural part of system architecture
4. Standardisation, ease of use
5. Digital transformation from paper bases process

Not all variables were included beginning in 2023

Integrated RAI Reporting System (IRRS)

Chile

interoperable waiting lists

Colombia

In addition to the Ministry of Health's RDA project, there are previous successful examples of HL7 FHIR adoption in Colombia, mainly in the private sector.

SURA: An insurer covering more than 10 million patients has been using HL7 FHIR since 2016 to exchange information with a network of more than 1,600 medical offices and hospitals.

Ecopetrol: (Colombian Petroleum Company), to strengthen its employee health plan, has been using HL7 FHIR since 2024 to exchange information with a network of more than 400 healthcare providers (the goal is to reach 1,400 points of care).

Keralty (Sanitas): An insurer with coverage for more than 8 million patients, it has been using HL7 FHIR since 2023 to exchange information with its internal network (more than 140 points of care).

All these projects have been supported by the HL7 affiliate in Colombia.

Costa Rica (3)

The reporting of mandatory illnesses, laboratory results, and immunizations. FHIR allows for "real-time" notification from social security to the Ministry of Health.

IPS entre hospitales privados y públicos

Implementation of IPS between CCSS and INS

Croatia

Exchange of clinical data via national Shared health Records infrastructure and building central EHR portal based on that data

Czech Republic

Implementation of new FHIR national standards in hospital information systems and e-ordering.

Yorkshire & Humber Care Record (YHCR/Interweave)

United States

Enabling Patients to access their data, and providers to deploy low cost SMART on FHIR applications, Bulk FHIR

CHALLENGES TO ADOPTING FHIR

Q. What are the biggest challenges for FHIR adoption in your country?
(multiple choice; multiple answers accepted)

Lack of FHIR knowledge remains the dominant challenge at 76 mentions, followed by high investment cost (48), unclear regulations (46), unclear benefits (39), changes in political direction (30) and other challenges (8).

Eight (8) respondents provided other answers as follows:

1. Big EHR vendors are not implementing the FHIR standards
2. Priorities in other aspects than standardisation, no business need to replace solutions which already work, market situation, lack of funding.
3. With a lack of vision and regulation/guidance from regulators, implementers lack the incentive to move to fhir (specially the ones on V2)
4. Getting senior level sponsorship
5. We have very deep legacy already
6. SW-Vendors
7. Consistent directions, very disperse projects now.
8. Legacy system complexity

Not all variables were included beginning in 2023

LOOKING FORWARD

Q. Are there any FHIR implementation use cases in the near future that you are looking forward to?

Respondents were given the opportunity to share FHIR use cases they are looking forward to in the near future.

Argentina

Service request and document exchange (other than IPS)

Australia

Patient Summaries, Care Plans, Encounter Records, eReferrals, Provider Directory

Austria

Within National Electronic health record System

Bangladesh

Patient Discharge Summary

Belgium

Problemlist HiX (Chipsoft)

Bosnia and Herzegovina

Yes, adopting more FHIR in interoperability between systems and align with EU standards

Brazil

Terminology

Canada

N/A

Chile

waiting lists for hospital wards, oncology waiting lists, drug prescriptions and dispensing, the National Immunization System, among others

Colombia

Yes, due to significant progress in the national adoption of HL7 FHIR and the characteristics of the standard, there are new use cases in the design and development phases (laboratory orders/results, prescription/dispensing of medications, claims, etc.), which could subsequently become national regulations.

Costa Rica (4)

No

Laboratory Results and Medical Imaging Reports.

Implementation of SNOMED-CT in EDUS

Diabetes labs

Côte d'Ivoire

Croatia

Implementation of screening programs based on CDSS Hooks, Computable Care Guides and Clinical Practice Guidelines specifications

Czech Republic

Lab, imaging, emergency services

Dominican Republic

Shared Health Record, National Cancer Registry, Public Health Reporting, National Health Surveillance, Health Prescription

National EHR

Ecuador

1. The October 2026 ""National Connectathon""
Following the definition of the National Interoperability Model this April, the upcoming Conectatón (October 2026) in Quito will be the first large-scale trial where the MSP, IESS, and private providers (RPC) must exchange a Resumen Digital de Atención (RDA) using FHIR R4.

2. Cross-Border ""Health Passports"" (PH4H)
Ecuador is currently a pilot country for the Pan-American Highway for Digital Health (PH4H). In the near future, we are looking at the implementation of International Patient Summaries (IPS).

3. Real-Time Epidemiological Surveillance (HIV & Chronic Diseases)
With the MSP's 2026 goal of reaching 25,000 PrEP users, there is a push to move HIV monitoring onto a FHIR-based reporting system."

Ethiopia

Yes

Finland

Sote välinen luovutuslupa (consent), sosiaalihuollon luouvutusilmoitus (audit event), toimintakyky (functional status), kysely- ja välityspalvelu (communication, communicationrequest)

Access of patient data to wellness applications, scheduling, medication list, consent, disclosure notifications / audit events, functional status, delivery of data to external authorities / communication, communicationrequest.

France (6)

Use FHIR as the only means of communication for an application, and use an ESB for format conversions to and from FHIR

OPEN SOURCE VS. PROPRIETARY FHIR

Q. To what extend are open source vs. proprietary FHIR software being used?

When asked the extent to which open source versus proprietary FHIR software is being used in their county, responses cluster in the middle of the open source-to-proprietary scale, with the largest group (34 respondents) choosing 3 on the 0-to-5 scale.

Exclusively open source

FHIR IMPLEMENTATION COMMENTS

Q. Is there anything else you'd like to share on FHIR implementation in your country?

Respondents were invited to share open-ended comments about FHIR implementation in their respective country.

Argentina

No

Australia

No.

Bangladesh

We need high investment for FHIR implementation

Canada

N/A

Chile

Governance, University programs

Colombia

Support from vendors such as Microsoft (Azure Health Data Services), AWS (HealthLake), Google (Healthcare API), and others has been important in accelerating the implementation of FHIR.

Côte d'Ivoire

Training on FHIR and advocacy

Dominican Republic

Not now

Ecuador

"I National Health Interoperability Summit – Ecuador 2026
The summit, held on March 20–21, 2026, in Quito, served as the definitive turning point for Ecuador's digital health landscape. Organized by HL7 Ecuador, it bridged the gap between policy and technical execution by convening the Ministry of Public Health (MSP), the Vice Presidency, IESS, and international partners (IDB/PAHO).

Key Outcomes:

Technical Standardization: Formalized the adoption of HL7 FHIR R4, SNOMED CT, and LOINC as the mandatory ""common languages"" for the National Health System.

National Model: Catalyzed the official definition of the National Interoperability Model (finalized in April 2026), focusing on the Single Electronic Health Record (HCUE) and the X-Road security layer.

Regional Alignment: Ensured Ecuador's participation in the Pan-American Highway for Digital Health (PH4H), enabling future cross-border exchange of patient summaries (IPS).

Future Roadmap: Set the stage for the National Connectathon in October 2026, where public and private systems will undergo live testing to prove their interoperability readiness.

This summit effectively moved Ecuador from the planning phase of the Digital Health Agenda 2024–2027 into active, standardized implementation."

Estonia

Challanges regarding existing data based on CDA and v3 (mappings and integrations).

Finland

There is a commitment to implement new interfaces, when reasonable, for national infrastructure using FHIR. National FHIR training is provided repeatedly by HL7 Finland. Several FHIR hackathons and Nordic collaboration on them and terminology services. Transition from CDA or old v2 interfaces may not be economically justified. EHDS may speed up the transition.

France

No

Guatemala

No

Ireland

FHIR will be a key enabler to deliver interoperability and exchange health data

Israel

"Very excited to lead the wide implementation of FHIR throughout our healthcare system and broaden it to other governmental entities who are required by law to implement FHIR as well"

Kenya

We are still in the early phase of FHIR adoption, which I anticipate will accelerate significantly over the next year or two, now that it has become policy in Kenya for all health systems to implement FHIR and integrate with the national Health Information Exchange.

Korea, Republic of

No

Lao People's Democratic Republic

No

Marshall Islands

Not for now

Nepal

Nepal is in the early stages of FHIR adoption. Current implementations focus on insurance claims processing (HIB & SSF), patient identification, and HMIS reporting, primarily using FHIR R4 in production. The Ministry of Health and Population, supported by SIL-Nepal, is developing national FHIR R5 specifications and interoperability frameworks. Future efforts will expand FHIR adoption across hospitals, labs, and community health programs to create a unified, interoperable digital health ecosystem.

Netherlands

Uptake has been slow without legislation, limited business case, and/or confusion due to misaligned statements by key influencers. Education will also bring more maturity in implementations and thinking

New Zealand

On-going discussions about how NZ might join the Australian FHIR Accelerator (Spark).

Nigeria

None.

Norway

Would like to see more Open Source

Rwanda

Rwanda is increasingly exploring the adoption of HL7 FHIR to strengthen interoperability across national digital health systems. Several health platforms, including OpenMRS and DHIS2, are already widely used in the country, creating strong opportunities for FHIR-based integrations.

There is growing interest among digital health stakeholders to use FHIR APIs for real-time data exchange, improved health information exchange, and integration of emerging technologies such as telemedicine and mobile health applications. Capacity building efforts led by professional communities like the Rwanda Health Informatics Alliance are also helping to develop local expertise in FHIR and health interoperability

Slovenia

We want to promote HL7 FHIR for better adoption and development of IG in Slovenia via HL7 Slovenia (https://hl7.si) and key stakeholders including academia: https://ibmi.mf.uni-lj.si/en/node/466

South Sudan

capacity on FHIR would enlighten the country on the early benefits of FHIR

Spain (2)

We are the country with the most certified people in Europe and second in the world

N/A

Switzerland

More education and investment by app developments is needed

Taiwan

No.

Tanzania, United Republic of

No.

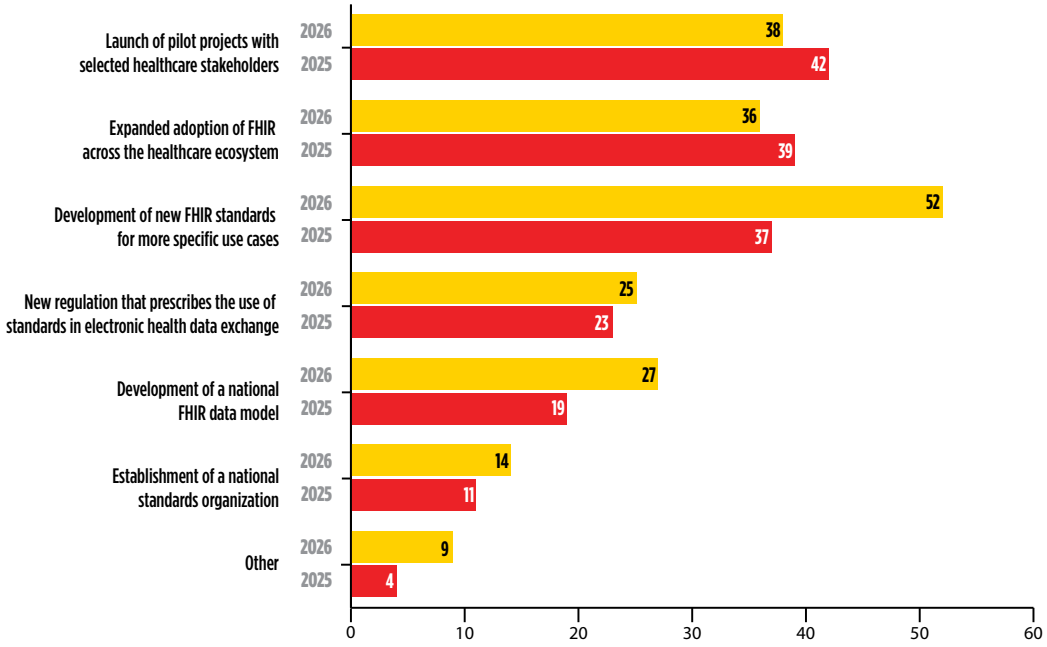

Togo

In Togo, the main challenge remains connectivity : FHIR is relevant where electricity in rural and network coverage hold, especially in rural areas.we're moving forward with targeted exchanges (consutations labs,pharmacy) and standars like FHIR, but we still keep paper as a safety net.if donors align their financing on sustainable interopereability rather than isolated pOCs, these small flows will become a real system. For now priority goes to training teams and data governance

Tonga

One of the key challenges in implementing FHIR is that many staff in Tonga do not yet have sufficient knowledge or technical capacity to maintain and monitor a FHIR-based system

MAJOR ACHIEVEMENTS OF FHIR ADOPTION

Q. What were the major achievements regarding FHIR adoption in the last year in your country? (multiple choice; multiple answers accepted)

The most often cited major achievements related to FHIR adoption in the past year were development of new FHIR standards for specific use cases (52), launch of pilot projects with selected healthcare stakeholders (38) and expanded adoption across the healthcare ecosystem (36).

Nine (9) respondent provided other answers as follows:

1. Publication of the implementation guides in Draft version.
2. N/A
3. Development of National Digital Health Interoperability Framework
4. Not much happening
5. Publication of first national terminology catalogues
6. Launching the national digital health strategy which recommends the use of FHIR standards
7. The National Health Information Centre (SK eHealth Agency) has recently begun addressing international standards, including FHIR and EHDS; however, most local vendors remain hesitant to proceed with implementation due to insufficient communication from national regulators.
8. National services under development adopting FHIR
9. No Achievements on FHIR

NEXT STEPS IN THE COMING YEAR

Q. What next steps do you expect will take place in the coming year regarding FHIR? (multiple choice; multiple answers accepted)

Expected next steps are led by expanded FHIR adoption across the healthcare ecosystem (62), development of new use-case standards (58), pilot projects (49), new regulation (45), a national FHIR data model (31), a national standards organization (19) and other steps (2).

Two (2) respondents provided other answers as follows:

1. **Costa Rica:** At least one annual networking event to validate the implementation guidelines.
2. **Papua New Guinea**: Adoption of FHIR standards and hopefully training on FHIR

Question added in 2025

NEXT STEPS IN THE COMING YEAR (con't)

	ESTABLISHMENT OF A NATIONAL STANDARDS ORGANIZATION	DEVELOPMENT OF A NATIONAL FHIR DATA MODEL	NEW REGULATION THAT PRESCRIBES THE USE OF STANDARDS IN ELECTRONIC HEALTH DATA EXCHANGE	DEVELOPMENT OF NEW FHIR STANDARDS FOR MORE SPECIFIC USE CASES	LAUNCH OF PILOT PROJECTS WITH SELECTED HEALTHCARE STAKEHOLDERS	EXPANDED ADOPTION OF FHIR ACROSS THE HEALTHCARE ECOSYSTEM

THESIS AGREEMENT

Q. "Within the next three years, I anticipate that in our country we will reap the benefits of FHIR adoption, leading to significant cost savings, enhanced care coordination, and a more robust digital health ecosystem—paving the way for the future of healthcare innovation." Please select to what extend you agree with this thesis.

Respondents are broadly optimistic about realizing FHIR's benefits: 74 of 100 agree or strongly agree the next three years will bring cost savings, better care coordination and a stronger digital health ecosystem, while 20 are neutral and 6 disagree/strongly disagree.

Strongly disagree

HL7® International

Founded in 1987, Health Level Seven® International (HL7) is an ANSI-accredited non-profit organization that empowers global health data interoperability by developing standards and enabling their adoption and implementation. In alignment with HL7's vision of "a world where everyone can securely access and use the right health data when and where they need it", HL7 created HL7 FHIR®, leveraging the latest web standards and applying a tight focus on implementability. HL7 affiliates have been established in more than 30 countries, and HL7 members represent approximately 500 corporate members, which include more than 90 percent of the information systems vendors serving healthcare. HL7 collaborates with other standards developers and providers, payers, philanthropic, and government agencies at the highest levels to ensure the development of comprehensive and reliable standards and successful interoperability efforts.

Firely provides all the software, training, and expertise to bring FHIR to life. We are one of the initiators of FHIR. The Firely team has been involved in FHIR since the beginning and is continuously contributing to the standard. Our 100% FHIR-based solutions enable compliance and innovation in one go. Our flagship products are Firely Server, Simplifier.net, and the open-source .NET SDK. Our software powers FHIR APIs and systems around the world. Governments, hospitals, payers, and HealthTech companies rely on our solutions for their FHIR capabilities. Besides software products, we offer training and consulting services to support our customers with their FHIR implementation. We play a prominent role in the FHIR Community and are the driving force behind FHIR DevDays, the world's foremost FHIR event.
